## I) Introduction

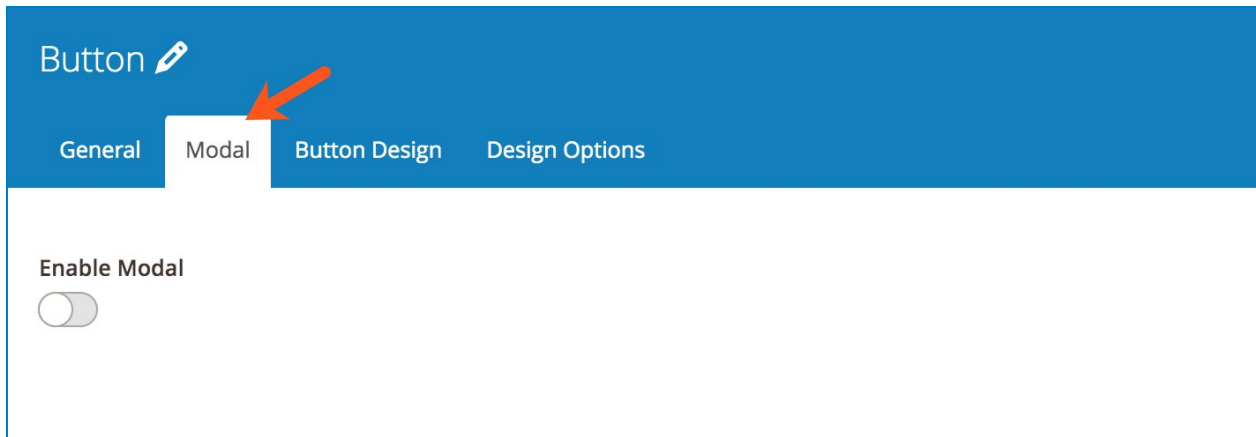

**Button Modal** plugin is a perfect way to display additional content on a page. The content will be showcased in an eye-catching, responsive modal popup that is triggered by clicking on a button.

- 2 Ways to Add Popup Content
- 6 Popup Animation Effects
- Various Custom Style Options
- Fully Responsive Popup

**Button Modal** is a plugin of [Magezon Page Builder](#) extension. Please pre-install Magezon Page Builder. After that, install Button Modal plugin and it will be integrated with existing page builder on your website.

## II) Where to Find Plugin

After the plugin is installed, you'll find a new tab called **Modal** in **Button element** settings. Turn on **Enable Modal** button and start configuring the plugin.

## III) How to Use

After turning on **Enable Modal** button, you'll find the following settings:

## 1. 2 Ways to Add Popup Content

There are 2 ways to add popup content: **Custom Content** & **Inline Element**.

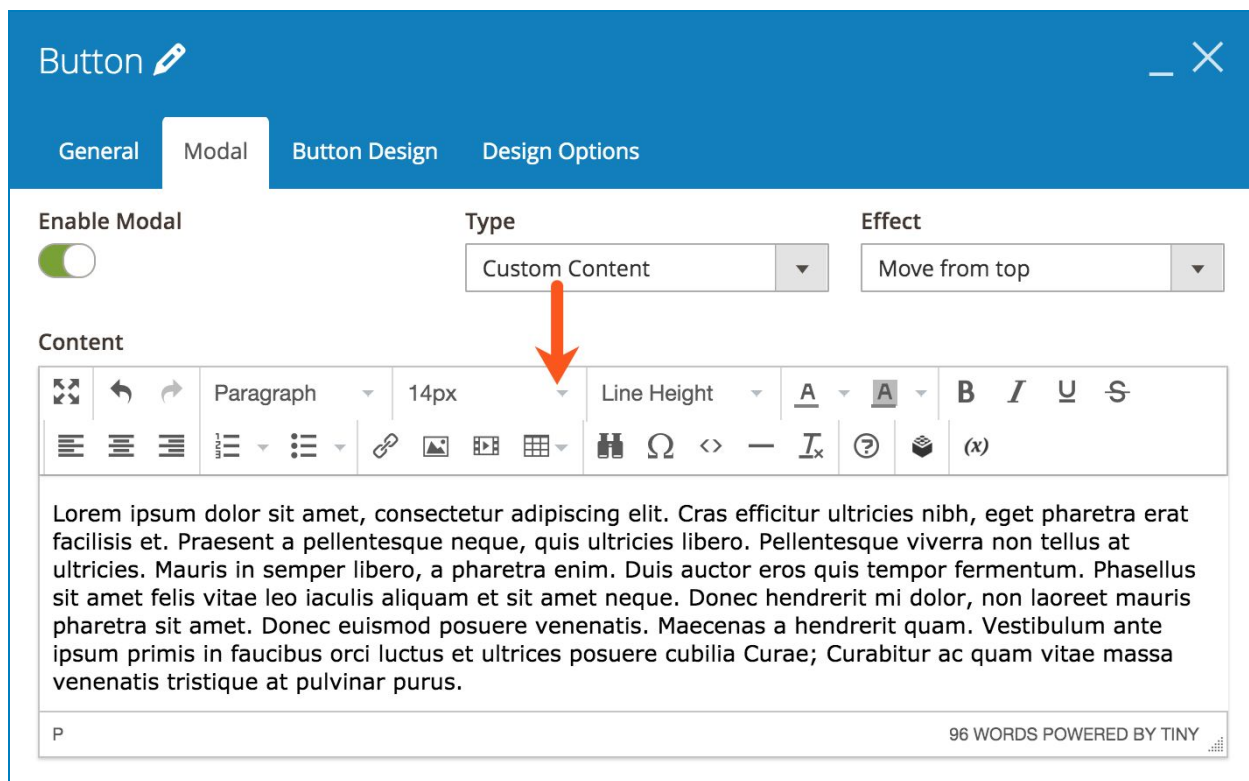

The screenshot shows the configuration interface for a Button Modal. The interface is divided into several sections:

- Enable Modal:** A toggle switch is currently turned on.
- Type:** A dropdown menu is open, showing two options: "Custom Content" (which is selected with a checkmark) and "Inline Element".
- Effect:** A dropdown menu is set to "Move from top".
- Content:** A rich text editor is visible, containing a paragraph of Lorem Ipsum text. The editor includes a toolbar with various formatting options like bold, italic, underline, and link.

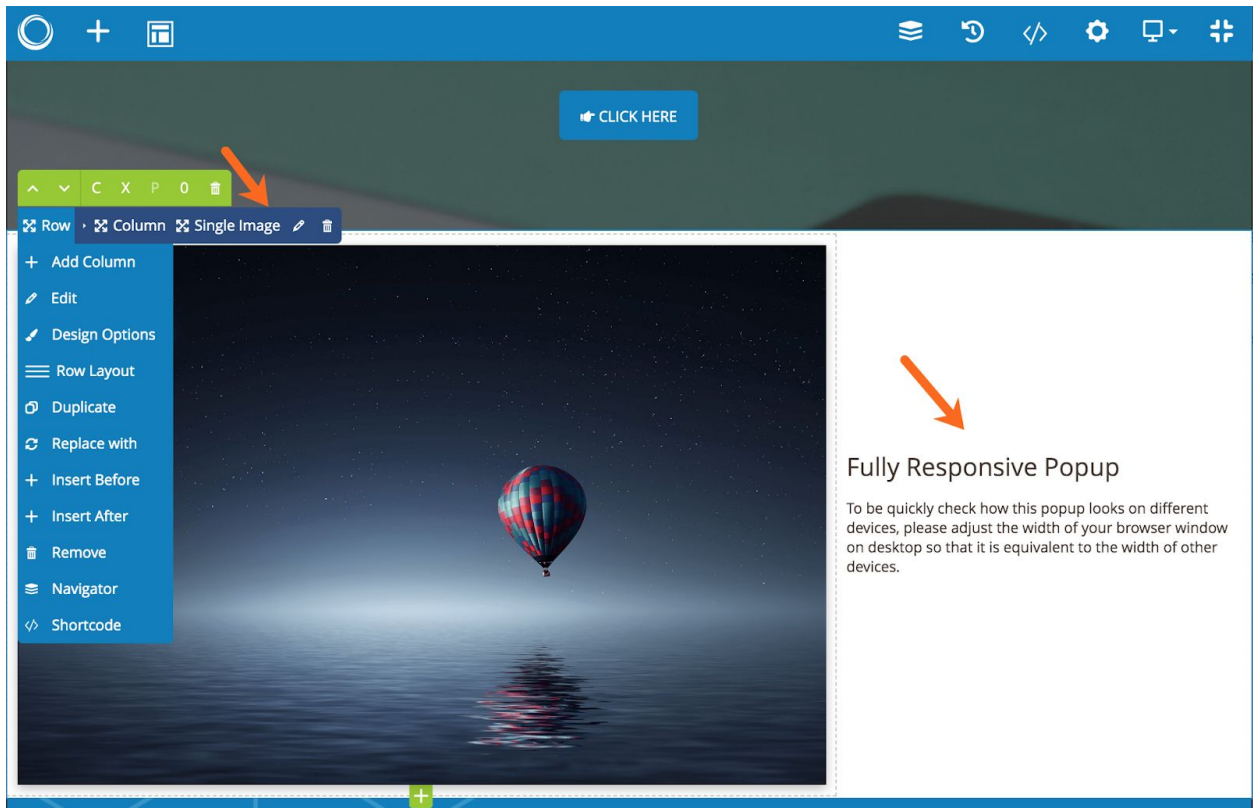

At the bottom right of the content area, it says "96 WORDS POWERED BY TINY".

- If you choose **Custom Content**, you'll add content for the popup by using Magento WYSIWYG editor.

- If you choose **Inline Element**, you can insert any content created by our [50+ elements](#). Below is how this type works:

- **Step 1:** In the builder section, add any elements from our 50+ elements to create the content that you want to display in the popup. It can be Text Block, Single Image, Video Player and so on. Besides, you can [create multiple columns](#) easily.

In the above image, we created 2 columns with the first one containing Single Image element and the second one containing Heading & Text Block elements.

- **Step 2:** Open settings of the elements that you want to show in the modal window. Find **Element ID** field and enter ID for each element. Also, you need to enable **Hide on Page Load** which will hide the elements on frontend.

Row 
\_ X

General
Dividers
Design Options

Select type of animation for element to be animated when it "enters" the browsers viewport (Note: works only in modern browsers).

**Disable Element**

**Hide on Page Load**

**Hide on**

**Element ID**

Enter element ID (Note: make sure it is unique and valid according to [w3c specification](#))

**Z-Index**

**Element Class Attribute**

Style particular content element differently - add a class name and refer to it in custom CSS.

**Element Inner Class Attribute**

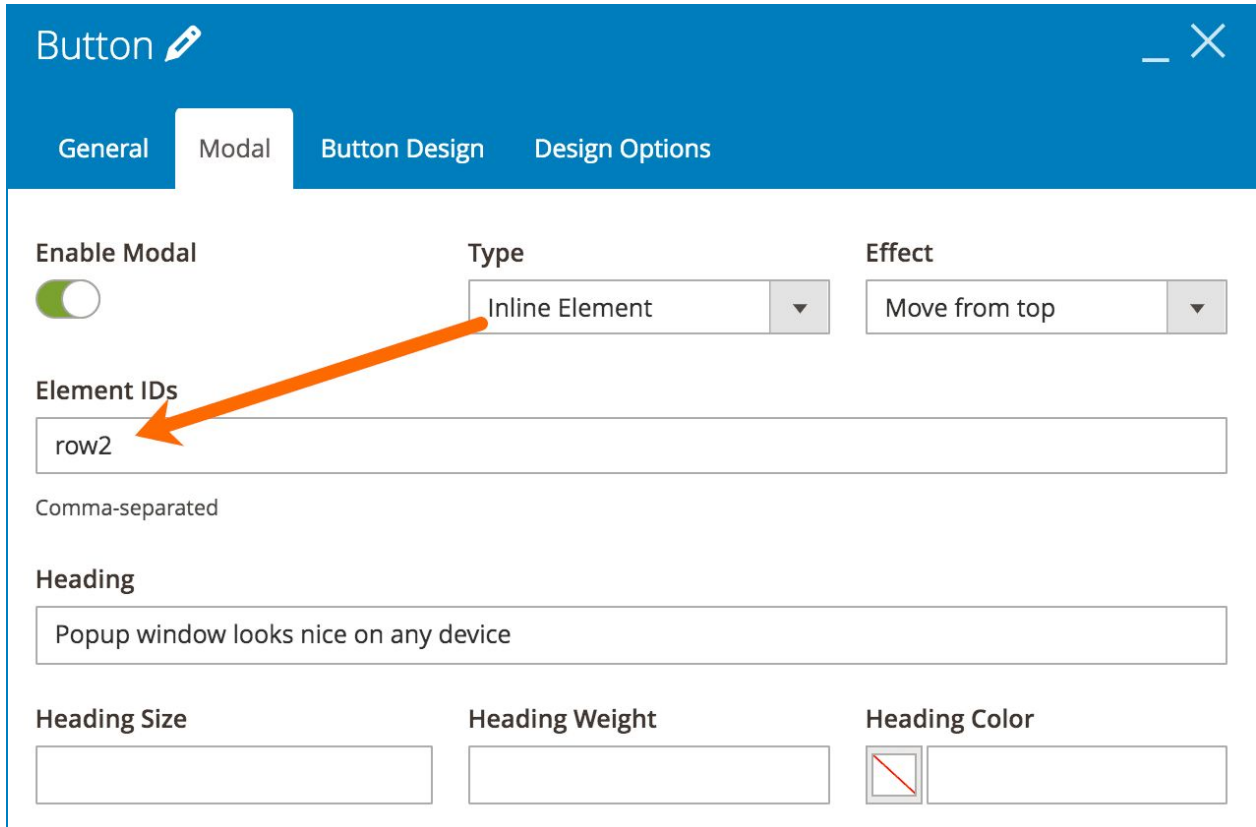

Style particular content element differently - add a class name and refer to it in custom CSS.

**NOTE:** If you have a container element such as row, section, tab, etc. that contains other elements, simply enter ID for this container element. No need to specify ID for each element within it.

For example, as we mentioned above, we created 2 columns with the first one containing Single Image element and the second one containing Heading & Text Block elements.

Here, we just need to open settings of the row containing these 2 columns and enter ID for the row (**row2** as in example).

- **Step 3:** In **Button** element settings, open **Modal** tab, then choose **Inline Element** type. In **Element IDs** field, enter IDs of the elements that will be displayed in the popup. In this example, we enter **row2**.
