I) Introduction

Shape Divider is a plugin for Magento 2 Page Builder extension. It allows users to replace original horizontal line between sections by aesthetic separator. With our various customizable designs, users can make their own version of divider in no time.

Here are some critical features that **Shape Divider** presents:

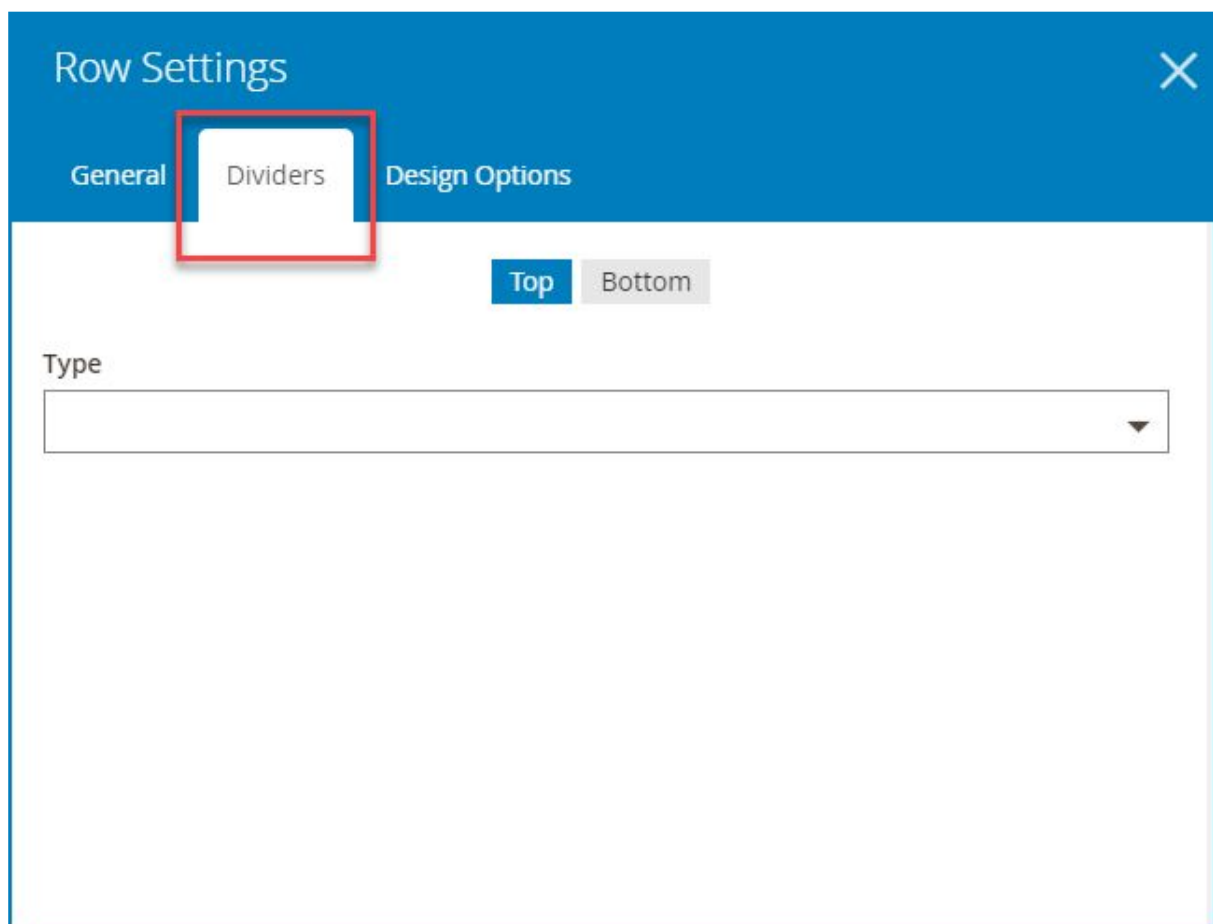

- Customize aesthetic dividers for rows and columns
- Multiple unique shape designs
- Responsive to all devices

Note: **Shape Divider** is a plugin of Magento 2 Page Builder extension. Please pre-install **Magento 2 Page Builder**. After that, install **Shape Divider** plugin and it will be integrated with existing Magento 2 Page Builder on your website.

II) Where to find plugin

After **Shape Divider** plugin is installed, a **Divider** Tab will appear inside the **Row Settings** and **Column Settings**. (In this User Guide, we make all the examples in **Row Settings**. Note that they can be applied **Column Settings** similarly). From there, it provides you a list of features to configure.

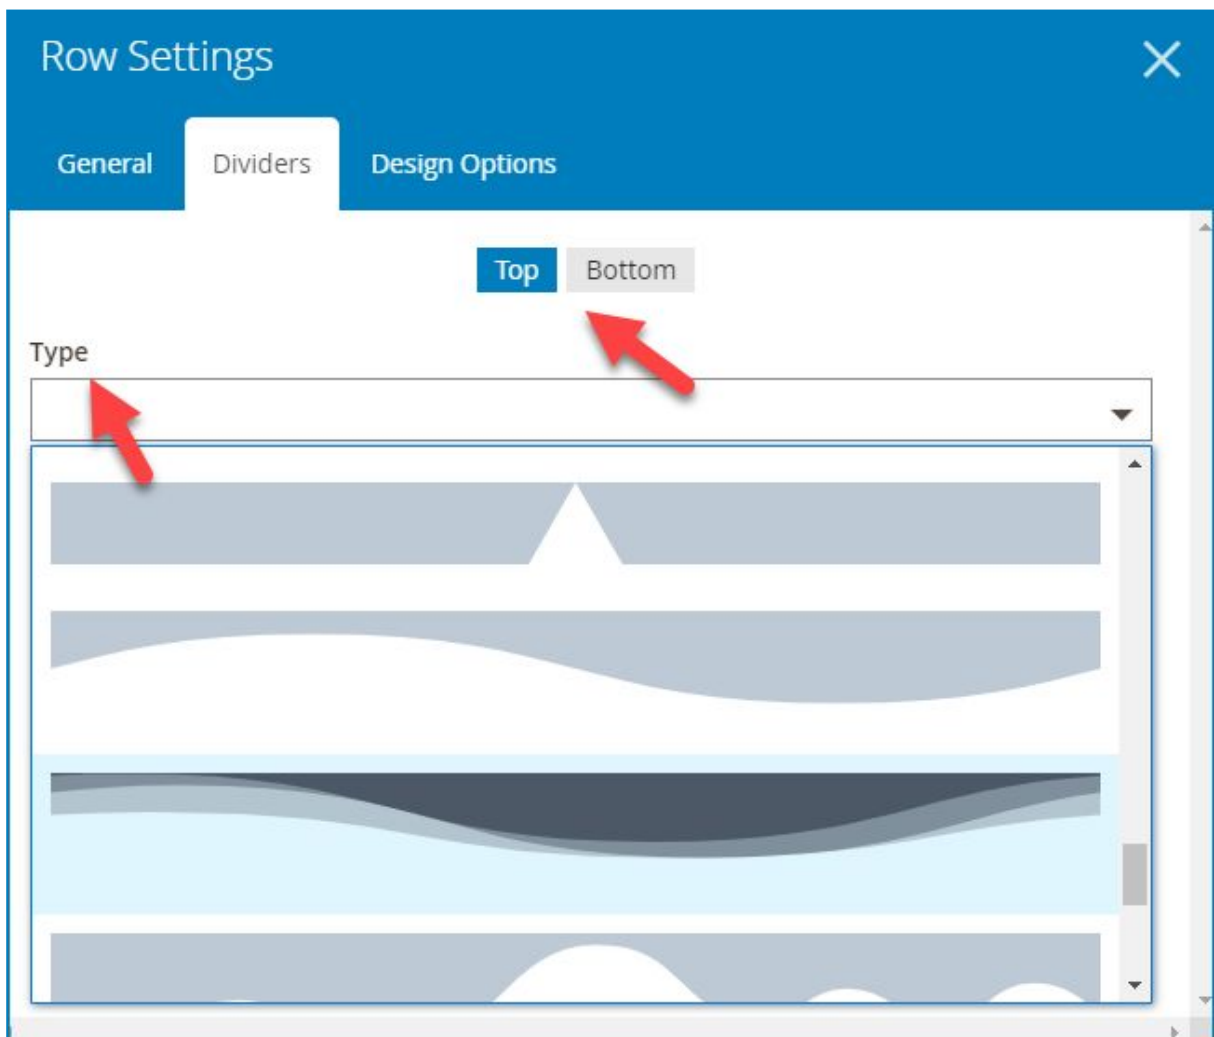

Check the photo below.

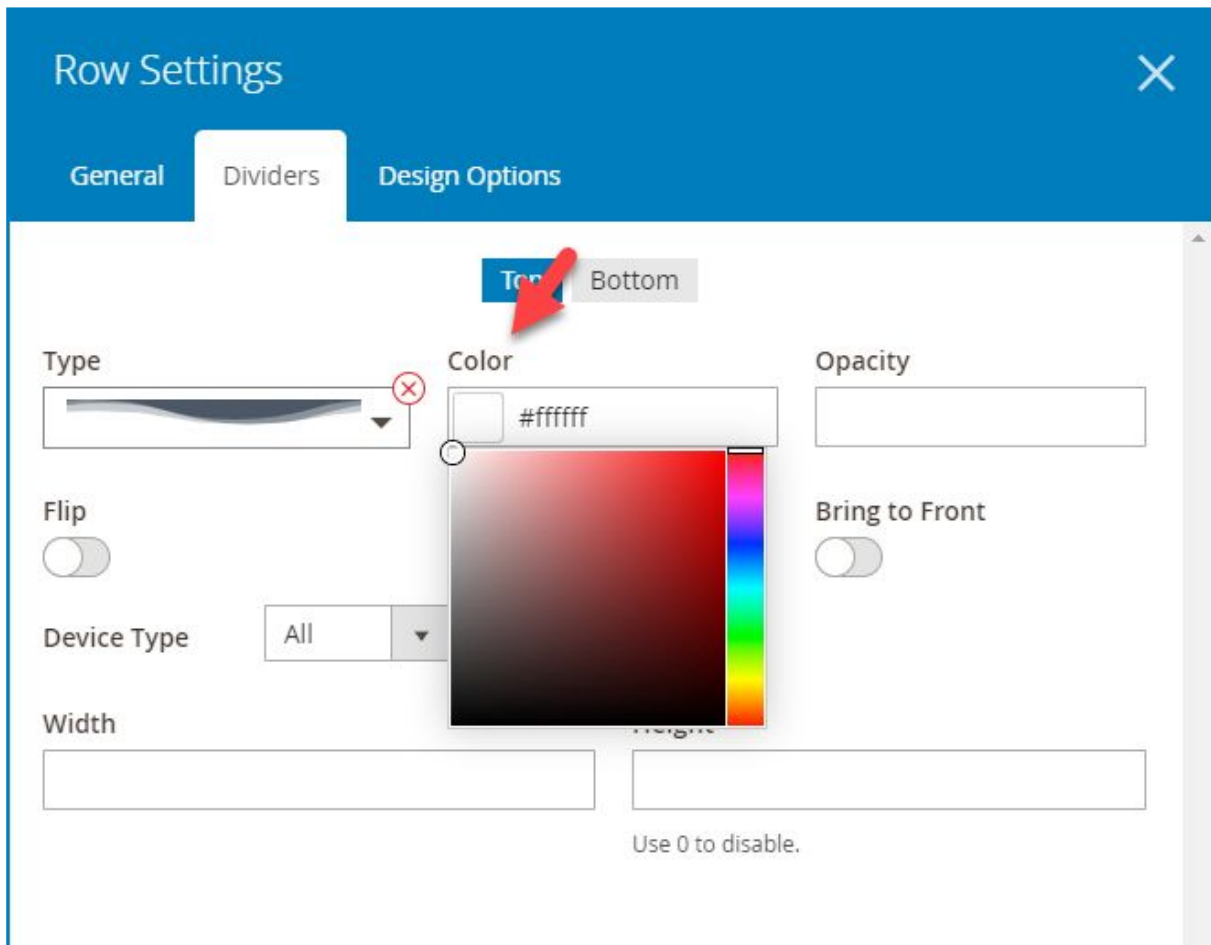

III) How to use plugin

Firstly, decide the position where divider will be applied by selecting either **Top** or **Bottom** Tab.

In the **Type** drop-down, click into a shape to choose it from the list.

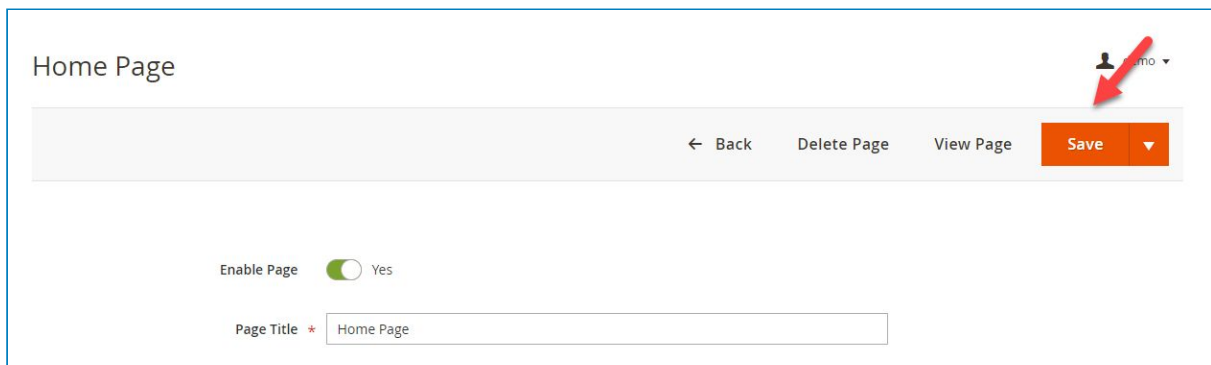

Add color to the divider from the color picker in **Color**

Click **Save** on the bottom right to save the options.

The image shows a 'Row Settings' dialog box with a blue header and a white body. The 'Dividers' tab is selected. At the top, there are two buttons: 'Top' (highlighted in blue) and 'Bottom'. Below this, there are three columns of settings: 'Type' with a dropdown menu showing a curved divider and a red 'X' icon; 'Color' with a color picker showing '#ffffff'; and 'Opacity' with an empty input field. Below these are three toggle switches: 'Flip', 'Invert', and 'Bring to Front', all currently turned off. There is also a 'Device Type' dropdown menu set to 'All'. At the bottom of the settings area are 'Width' and 'Height' input fields, with a note 'Use 0 to disable.' below the height field. At the very bottom of the dialog are two buttons: 'Close' (grey) and 'Save' (blue). A red arrow points to the 'Save' button.

Click **Save** on the top right of the page to save the page.

Enter a number (0-1) to choose the level of transparency for divider in **Opacity**

Example: This is the backend settings and frontend results when opacity of divider is 0.

Backend:

The screenshot shows the 'Row Settings' dialog box with the 'Dividers' tab selected. The 'Top' button is active. The 'Opacity' field is empty, indicating a value of 0, and is highlighted with a red arrow. Other settings include: Type (a wavy divider), Color (#ff6a00), Flip (disabled), Invert (disabled), Bring to Front (disabled), Device Type (All), Width, and Height (both empty). A note at the bottom right says 'Use 0 to disable.'

Frontend:

Porto theme, change the themes as often as you like. Also, your content will come along with you even when your design tastes change.

Enable/disable **Flip** toggle to flip your divider vertically.

The image shows a 'Row Settings' dialog box with a blue header and a white body. The 'Dividers' tab is selected. At the top, there are tabs for 'General', 'Dividers', and 'Design Options'. Below these, there are sub-tabs for 'Top' and 'Bottom'. The 'Type' dropdown shows a curved divider with a red 'X' icon. The 'Color' field contains 'ffffff'. The 'Opacity' field is empty. The 'Flip' toggle is turned on (green) and is highlighted with a red arrow. The 'Invert' and 'Bring to Front' toggles are turned off (grey). The 'Device Type' dropdown is set to 'All'. The 'Width' and 'Height' fields are empty. A note at the bottom right says 'Use 0 to disable.'

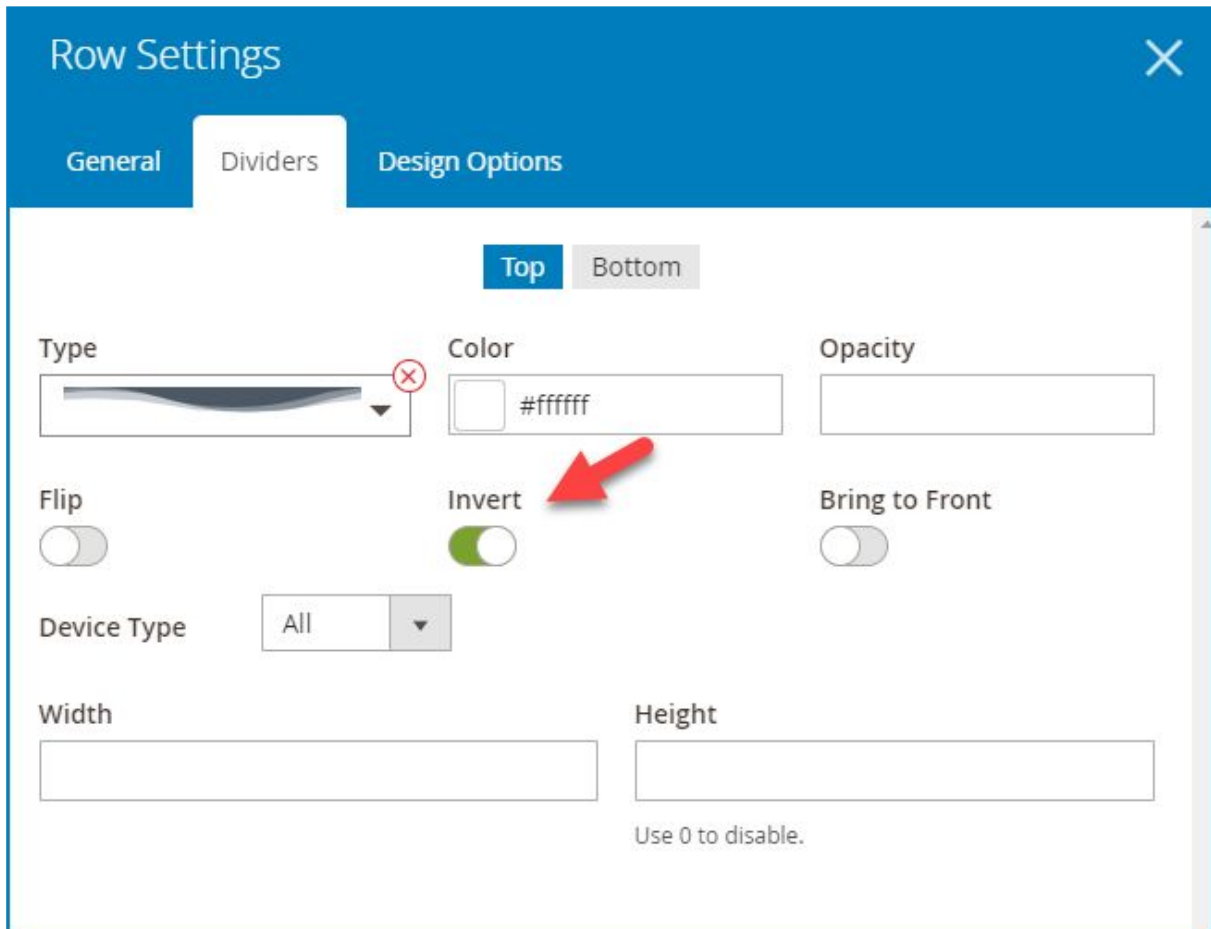

This is how the divider looks before **Flip**:

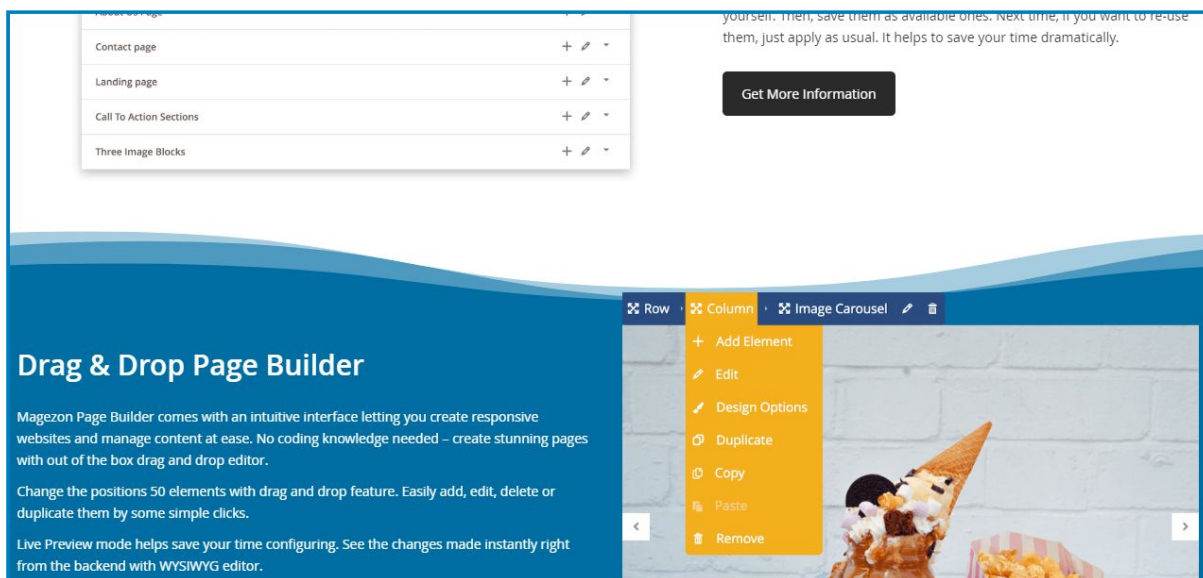

This is how it looks after **Flip**:

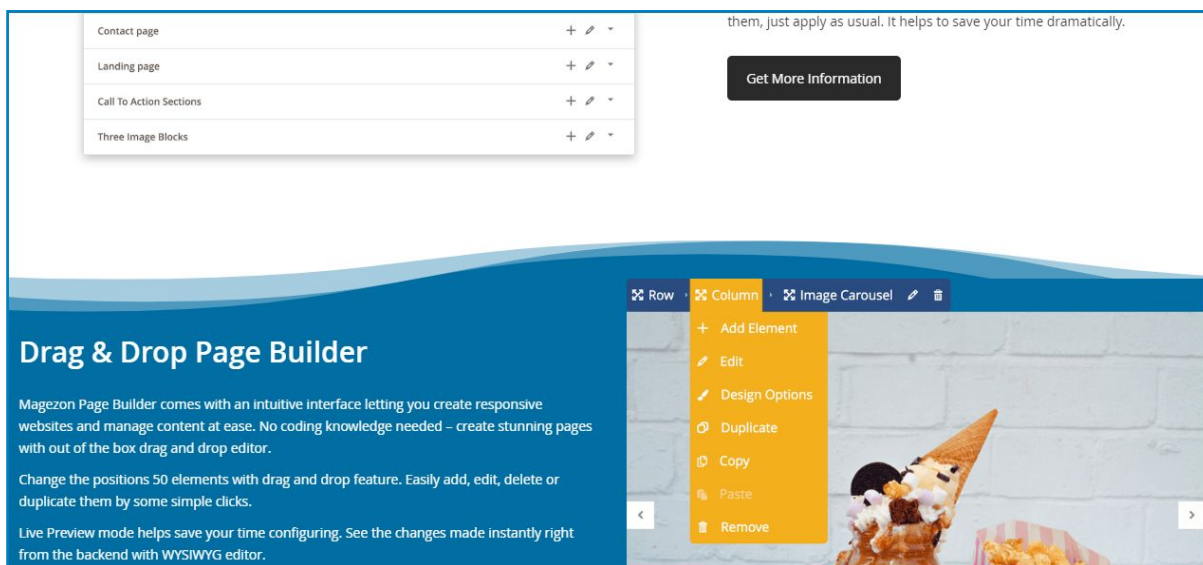

Enable/disable **Invert** toggle to flip your divider horizontally.

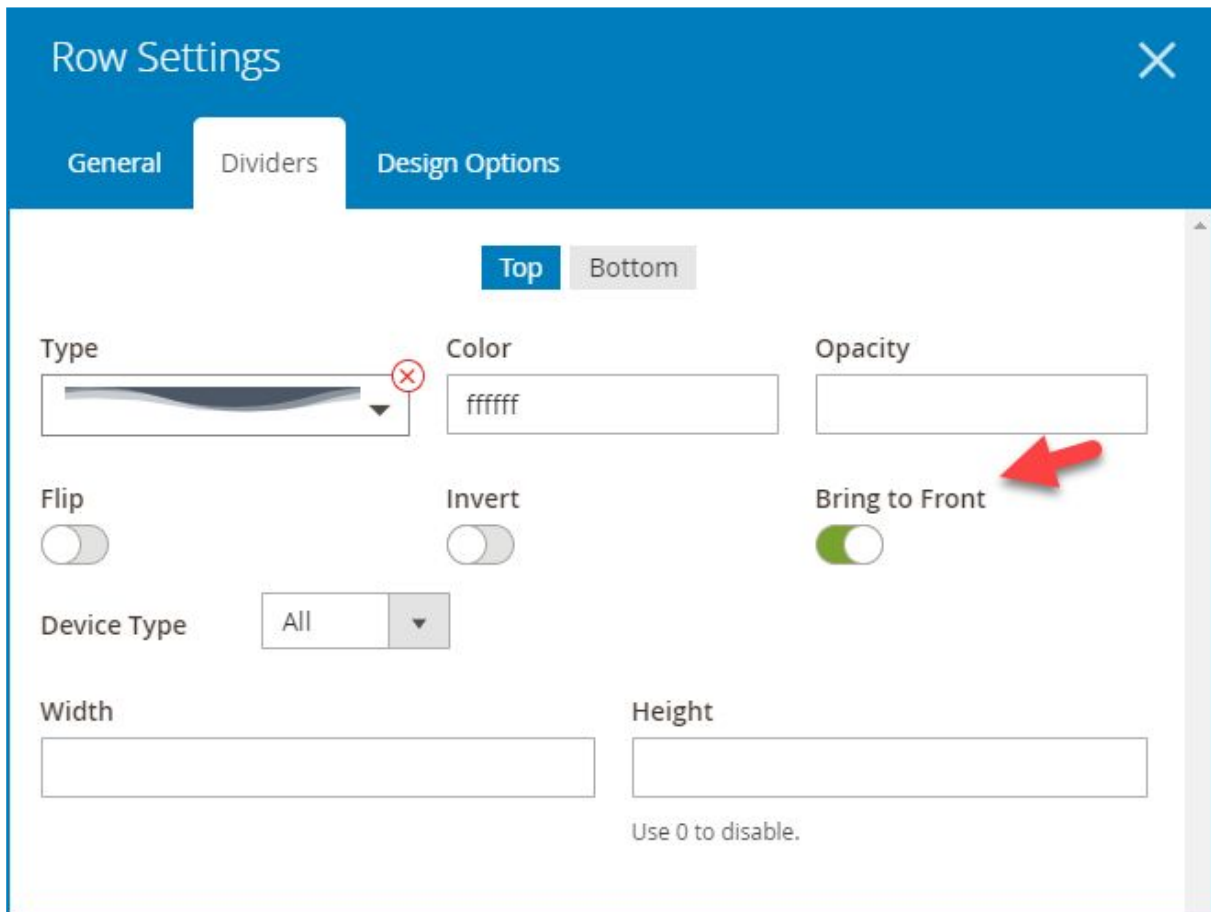

Before **Invert**:

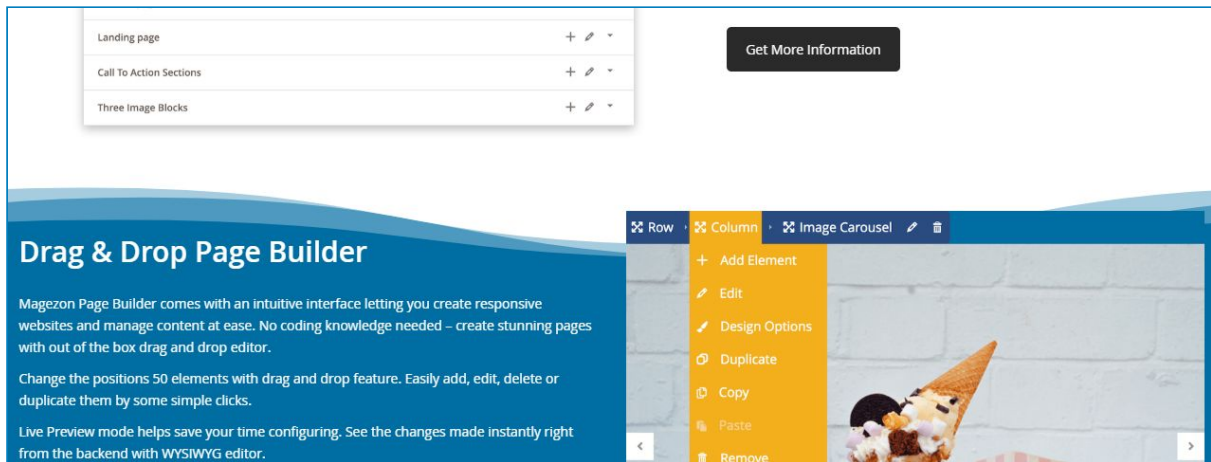

After **Invert**:

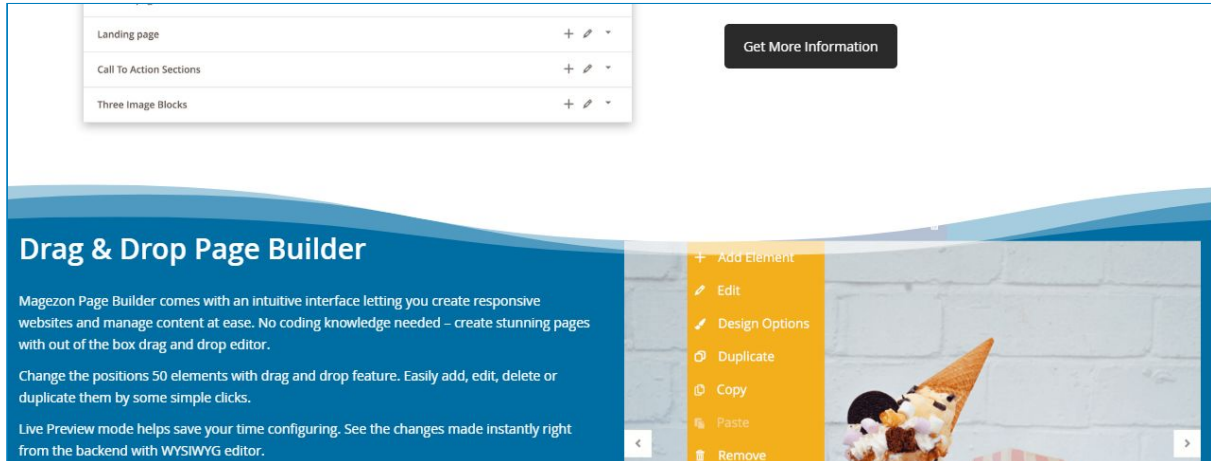

Enable/disable **Bring to front** toggle to make the divider nearer the screen than the content block.

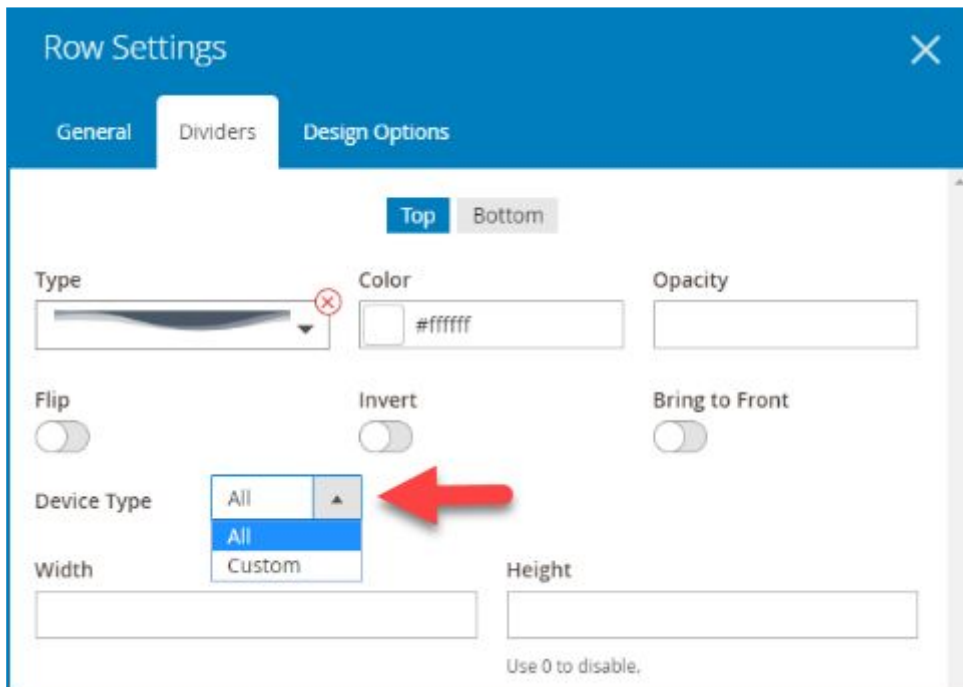

Bring to front disabled :

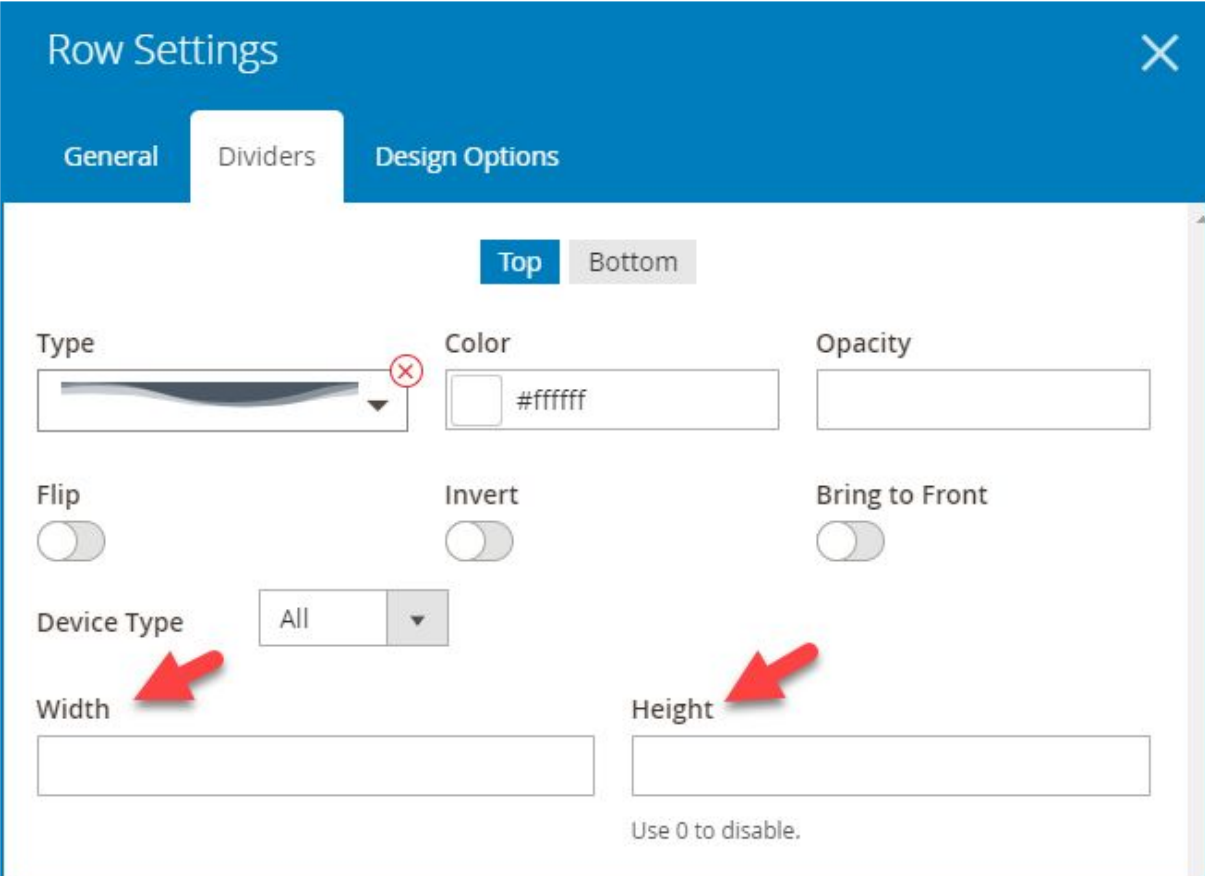

Bring to front enabled:

In the **Device Type**, select **All** to apply divider to all types or **Custom** to customize your own size of divider for each interface.

Width and **Height** are optional. You can leave it blank so the divider will be set in default mode. Or you can enter numbers to resize the divider as you like.

Row Settings

General Dividers Design Options

Top Bottom

Type Color Opacity

Flip Invert Bring to Front

Device Type All

Width Height

Use 0 to disable.

A small tip for you: Enter "0" into **Height** to disable divider.

Here is an example for you. For desktop, customize the divider by changing **Width** and **Height** as below in backend:

Device Type  

Width

Height

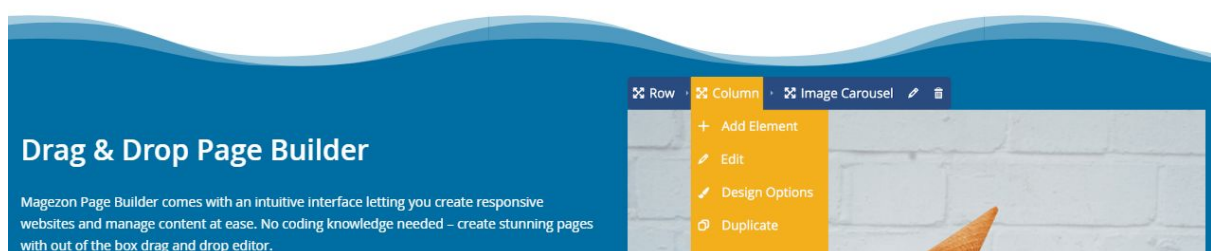

Use 0 to disable.

The divider will be reshaped as you can see in frontend:

Contact page	+ ✎ -

But it doesn't look very nice on mobile screen.

To change this, click into the icon of mobile portrait and enter the new **Width** and **Height** you like. In this example, we choose **Width** = 100, **Height** = 70

Device Type

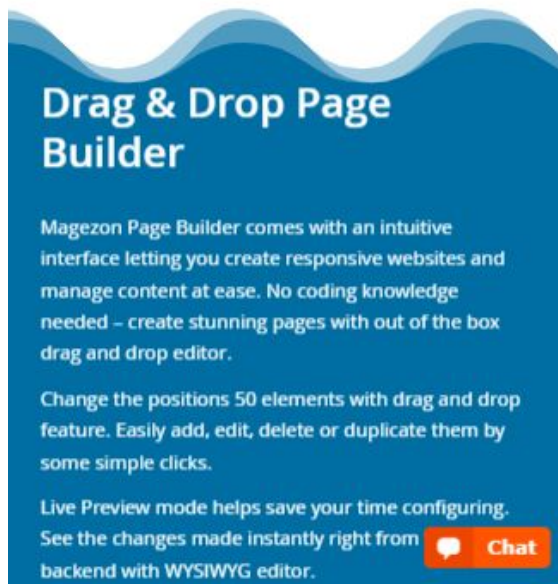

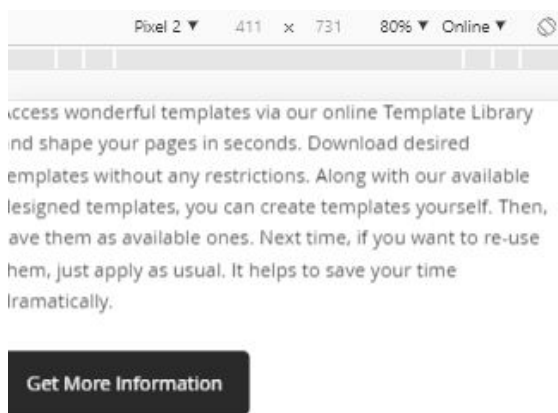

Width

Height

Use 0 to disable.

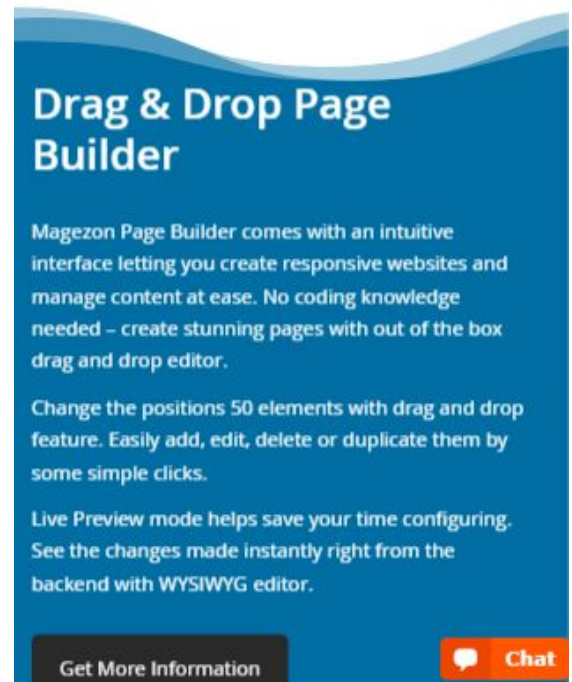

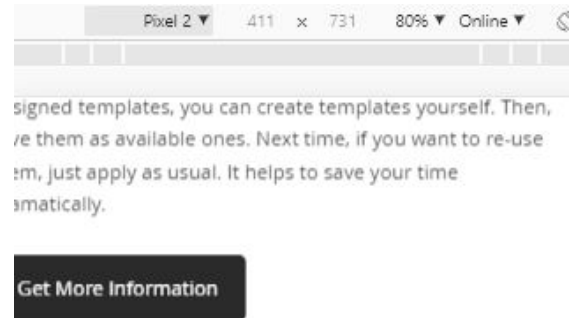

Before customizing,

With Width = 40 and Height = 180

After customizing,

With Width = 100, Height = 70
