1) Introduction

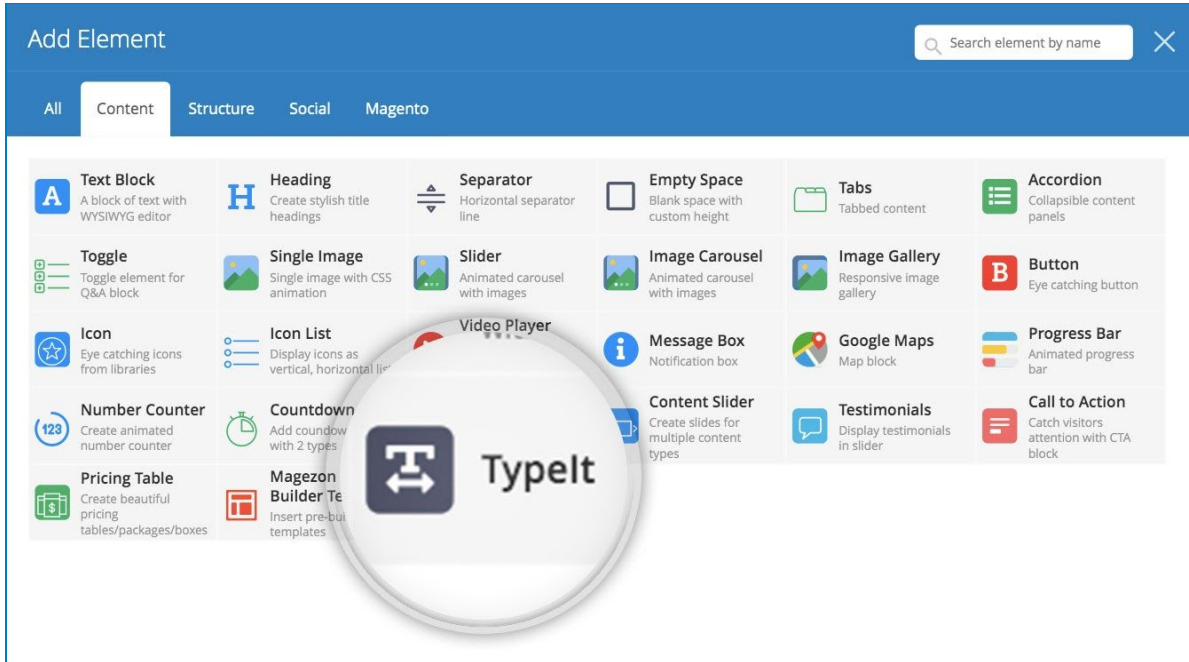

This document is the User Guide for **Typeit**. It describes the plugin functionality and provides some tips for a quick start.

Typeit enables users to create animated typings and customize them freely. This way, it decorates your websites and make them more lively.

Note: As **Typeit** is a plugin of Magezon Page Builder, please pre-install **Magezon Page Builder** in order to set it up. Then, **Typeit** will be integrated with the page builder quickly.

II) Where to find the plugin

Once installing **Typeit**, the plugin will be added as an element in the Element List.

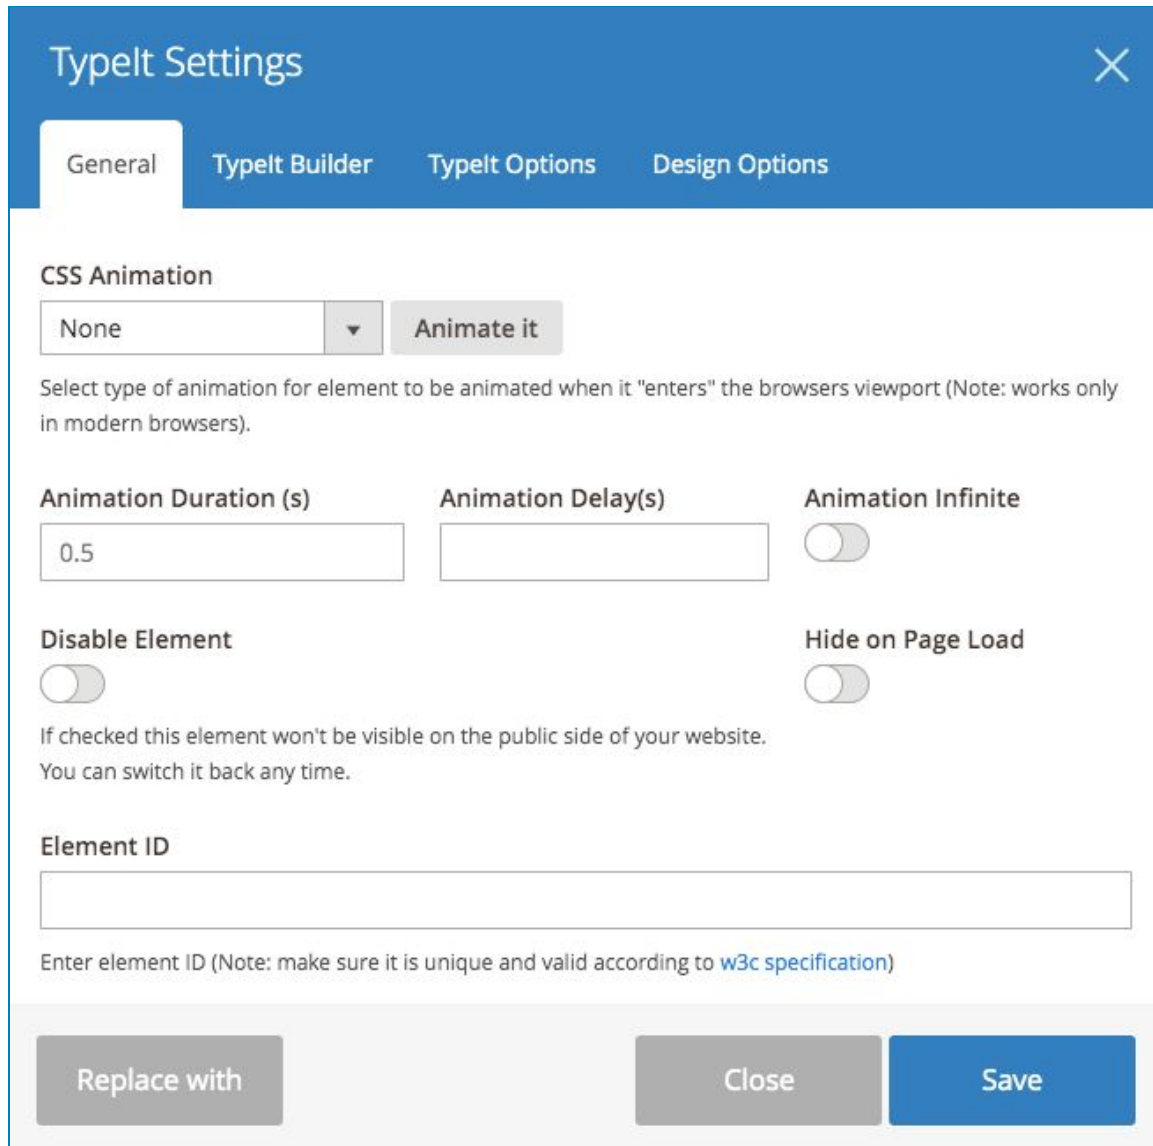

Try adding it as a single element and then configure it like usual.

III) Typeit Settings

1. Typeit Builder Tab

The plugin's configuration comes with a pop-up of 4 tabs like below

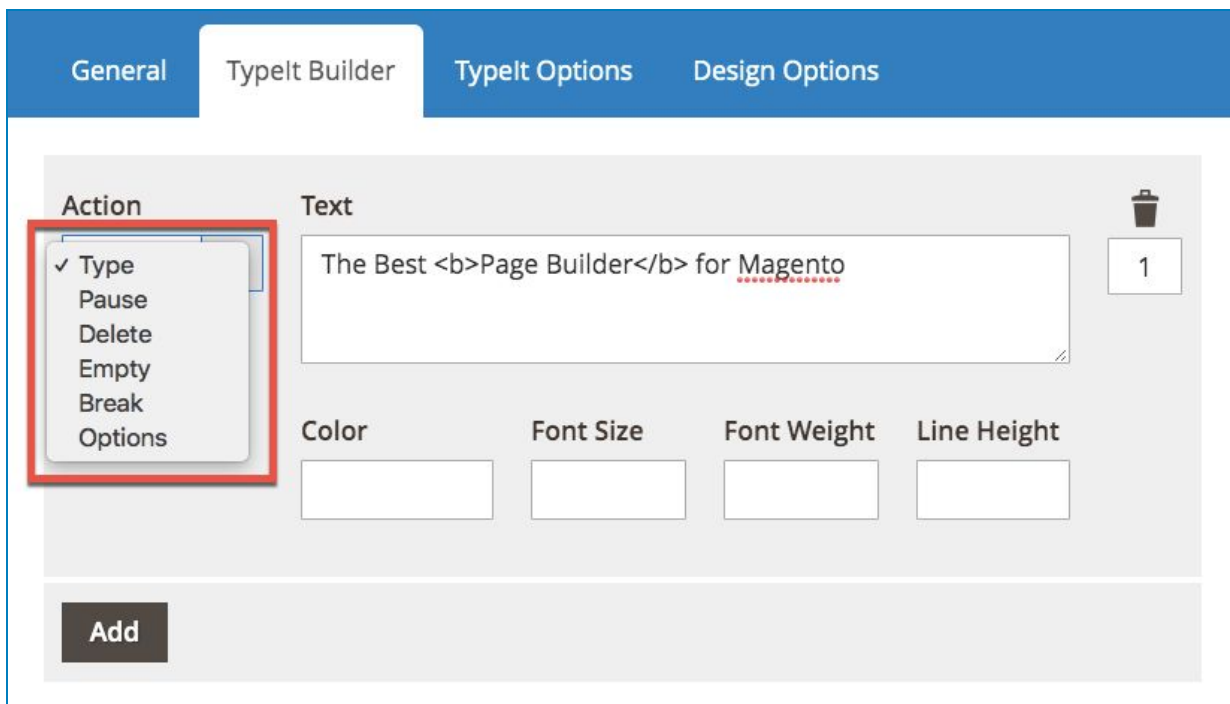

The **General** and **Design Options** Tabs get the same functions like other elements. To have a quick view, read the [User Guide](#) of **Magezon Page Builder**.

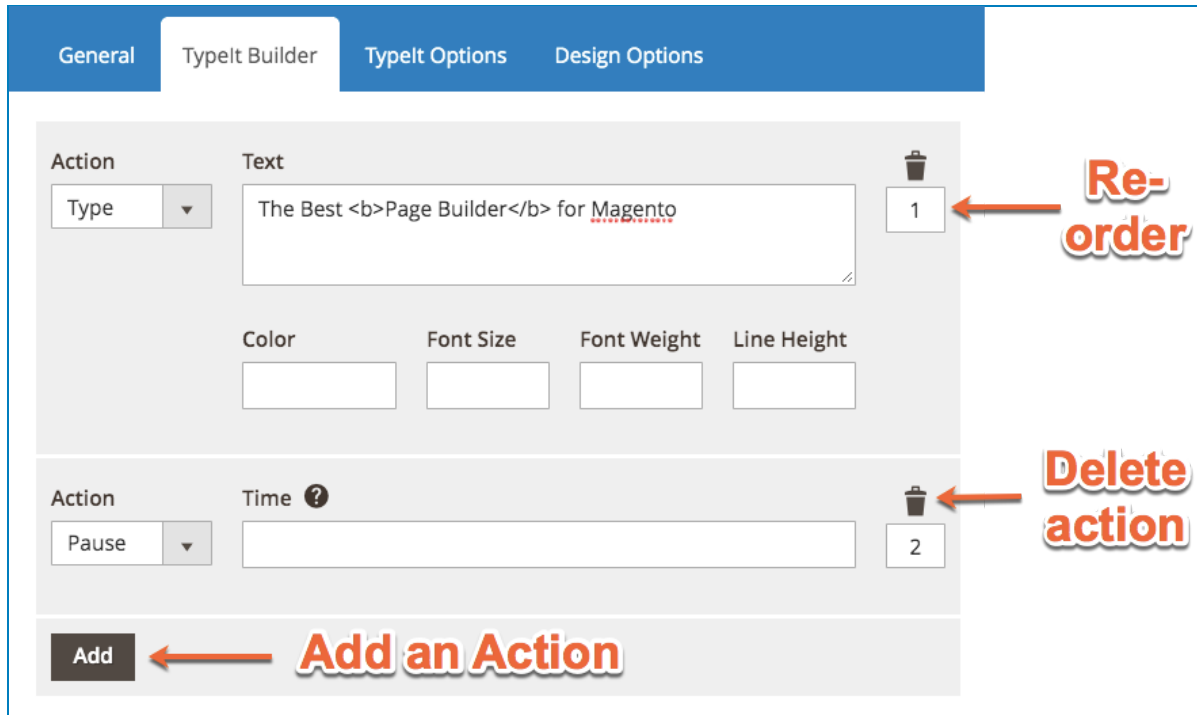

2. Typeit Builder

This tab lets you make up your animated typings the way you want. Decide how the letters dance using the list of **Actions**:

- **Type**
- **Pause**
- **Delete**
- **Empty**
- **Break**
- **Options**

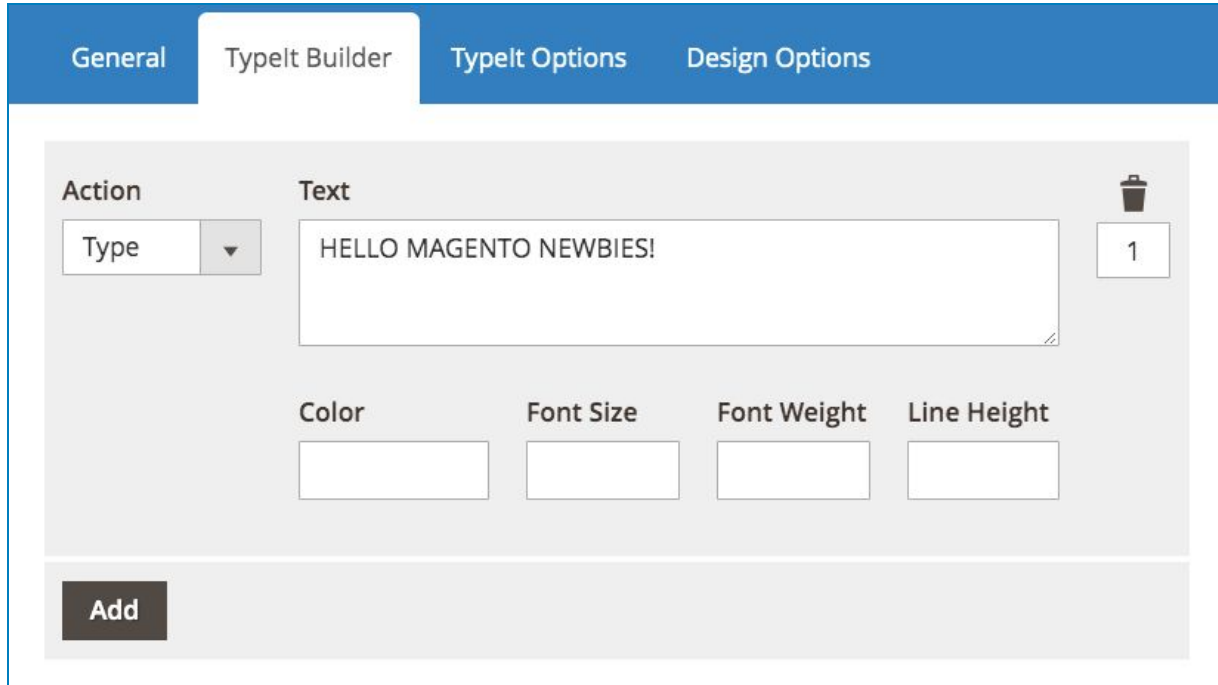

- To make a new action, click “Add” button.
- To change the order of an Action, re-enter the number in the box. To delete an action, simply hit the recycle bin icon.

- **Color:** Define the color of the string for the current Action. Enter the color code into the field.
 - **Font Size:** Enter the number to set the size for the text of current Action.
 - **Font Weight:** Enter the number to set the font weight for the text.
 - **Line Height:** Define the height of each line by entering the number.
- All the size are calculated by pixel.

2.1 Type

Selecting **Type** means you let your letters to be typed. After choosing **Action**, enter your desired text in the **Text** field. Like this:

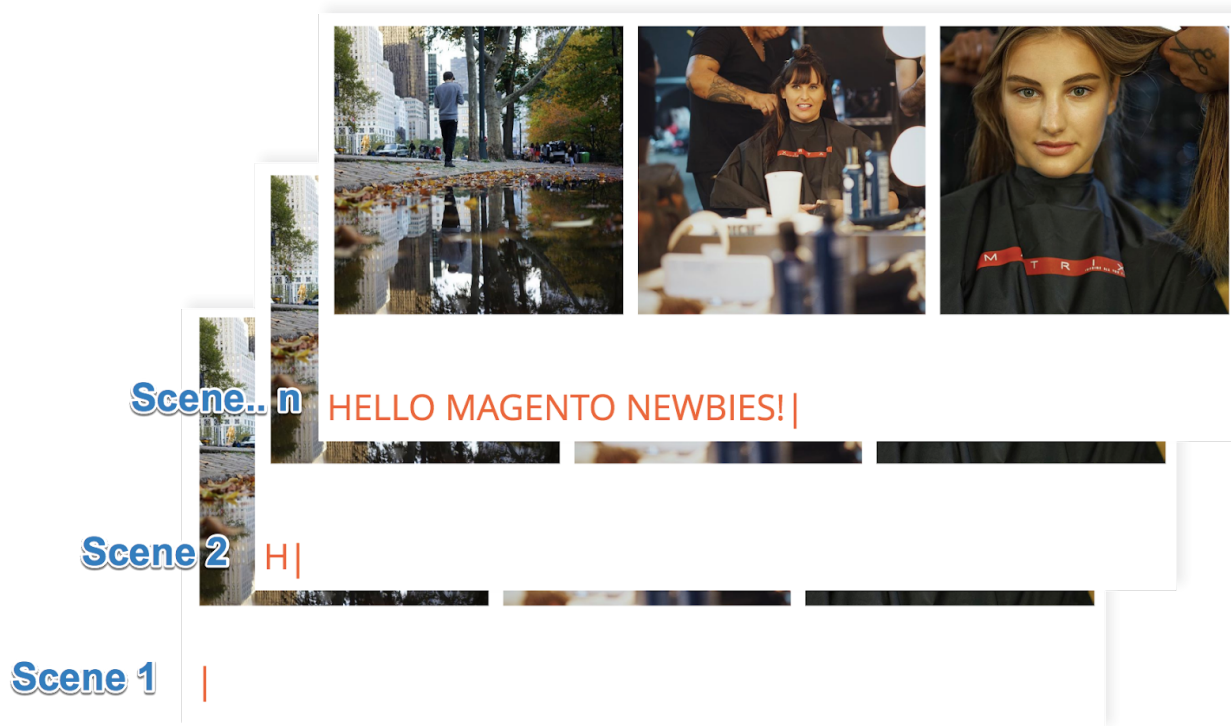

The screenshot displays the 'Typeit Builder' interface. At the top, there are four tabs: 'General', 'Typeit Builder' (which is active), 'Typeit Options', and 'Design Options'. Below the tabs, the interface is divided into several sections:

- Action:** A dropdown menu currently set to 'Type'.
- Text:** A large text input field containing the text 'HELLO MAGENTO NEWBIES!'. To the right of this field is a trash icon and a small box containing the number '1'.
- Color:** An empty text input field.
- Font Size:** An empty text input field.
- Font Weight:** An empty text input field.
- Line Height:** An empty text input field.

At the bottom left of the interface, there is a dark grey button labeled 'Add'.

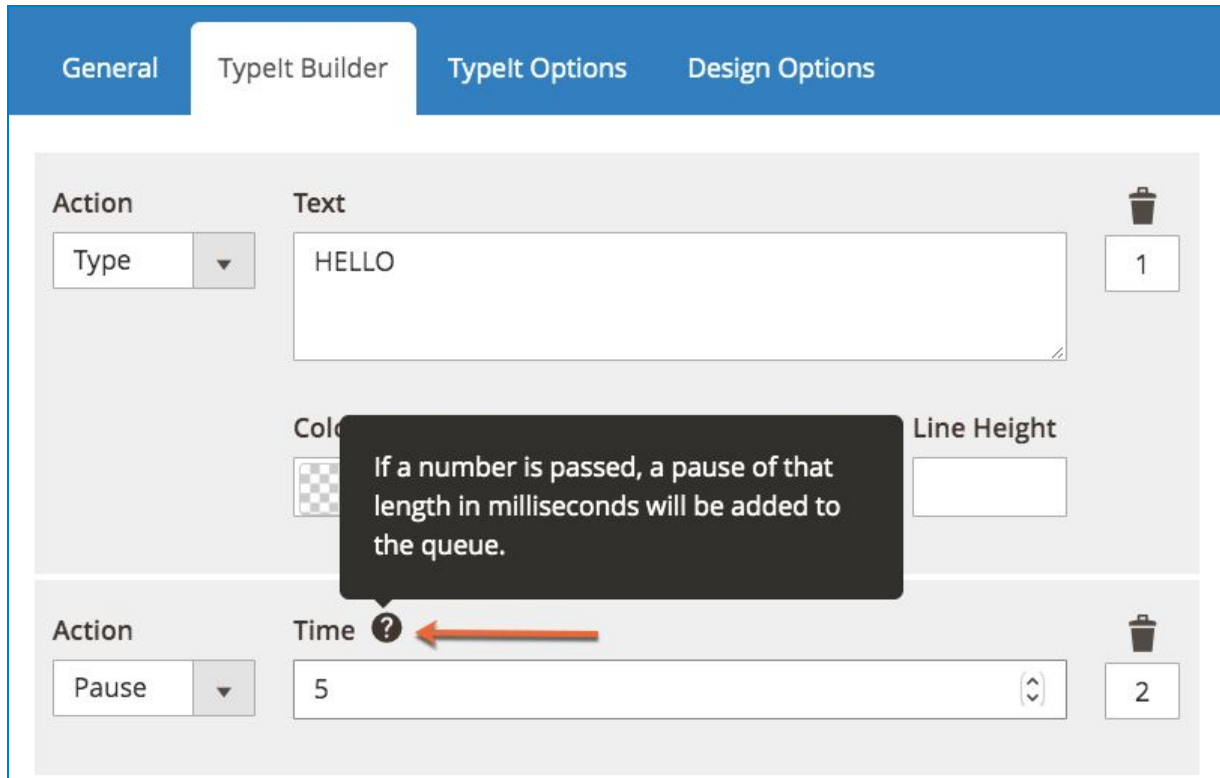

Without choosing any special effect in the next tab, the result in the front will be like this
(The text color is set to be #ff6a00)

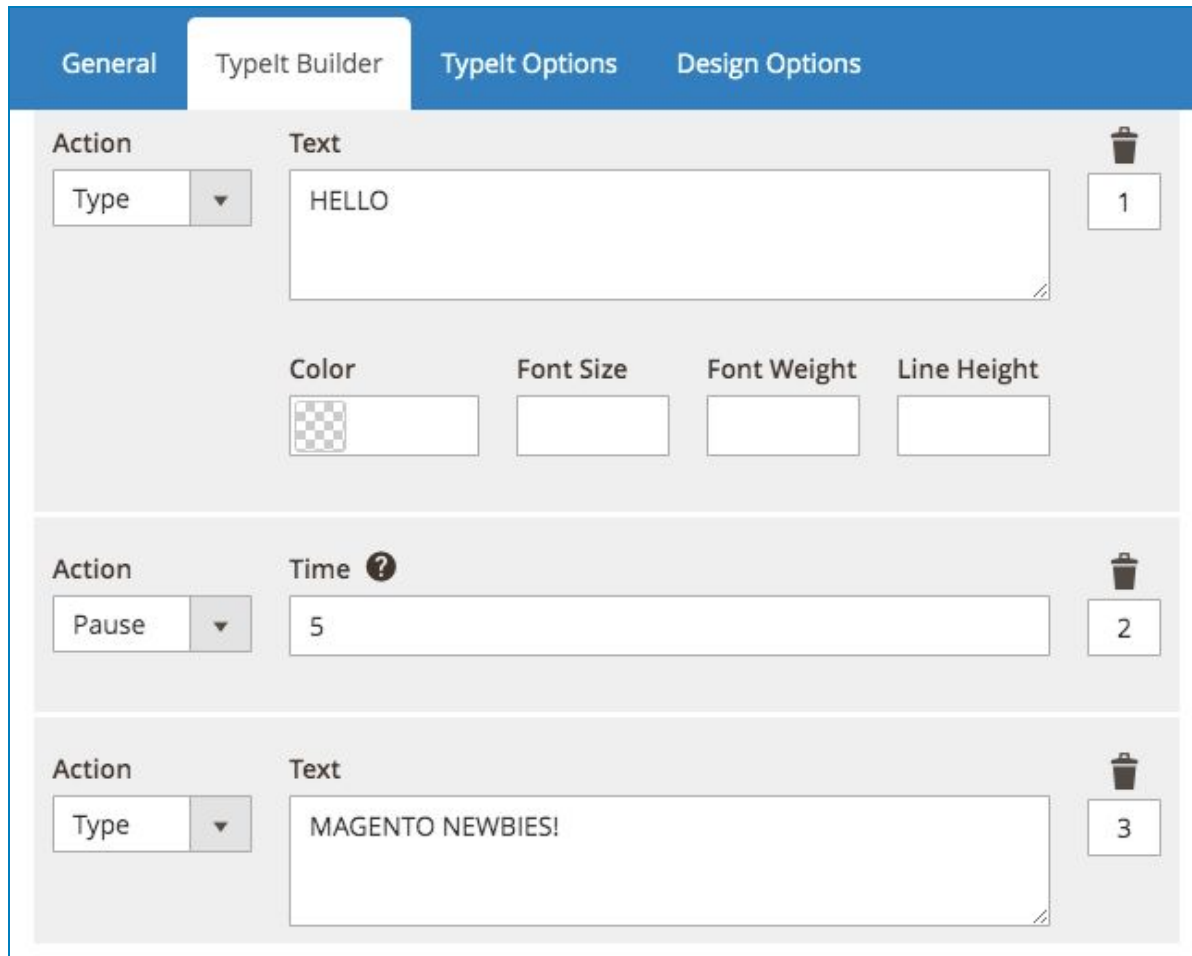

2.2 Pause

Pause action lets your texts “rest” for a time. Set the “rest time” for the action by entering the exact number (Unit: milliseconds).

Hover your mouse into the question icon to get full indication for the field.

Now, try this setting:

The screenshot displays the 'Typelt Builder' tab of the Typeit interface. It features three text elements, each with an 'Action' dropdown, a text input field, and a trash icon. The first element has the action 'Type' and the text 'HELLO'. The second element has the action 'Pause' and the time '5'. The third element has the action 'Type' and the text 'MAGENTO NEWBIES!'. Below the first element, there are four settings: 'Color' (with a color picker), 'Font Size', 'Font Weight', and 'Line Height', each with an input field.

Action	Text	Order
Type	HELLO	1
Pause	5	2
Type	MAGENTO NEWBIES!	3

And the result will be like this:

Rest for 5 millisecond

HELLO |

Then continue typing

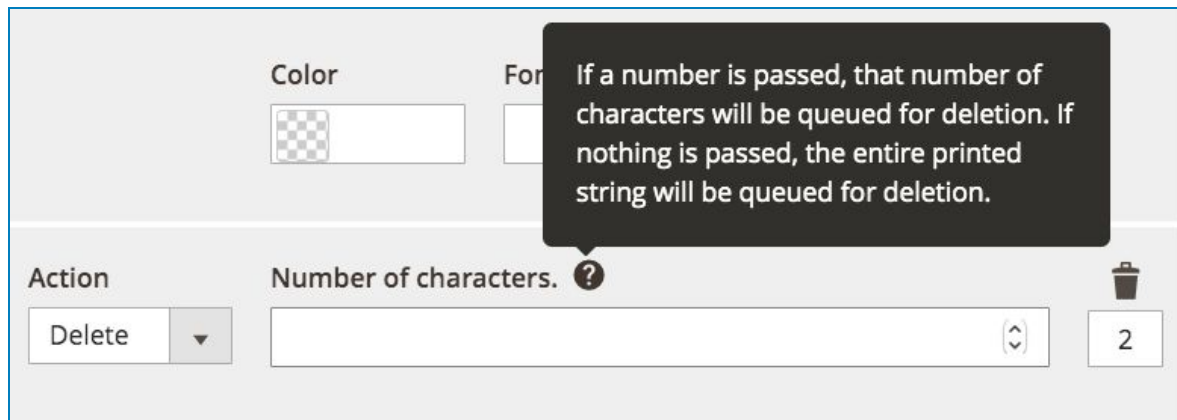

HELLO MAGENTO NEWBIES! |

2.3 Delete

This action helps **Delete** the letters just typed. You can choose from:

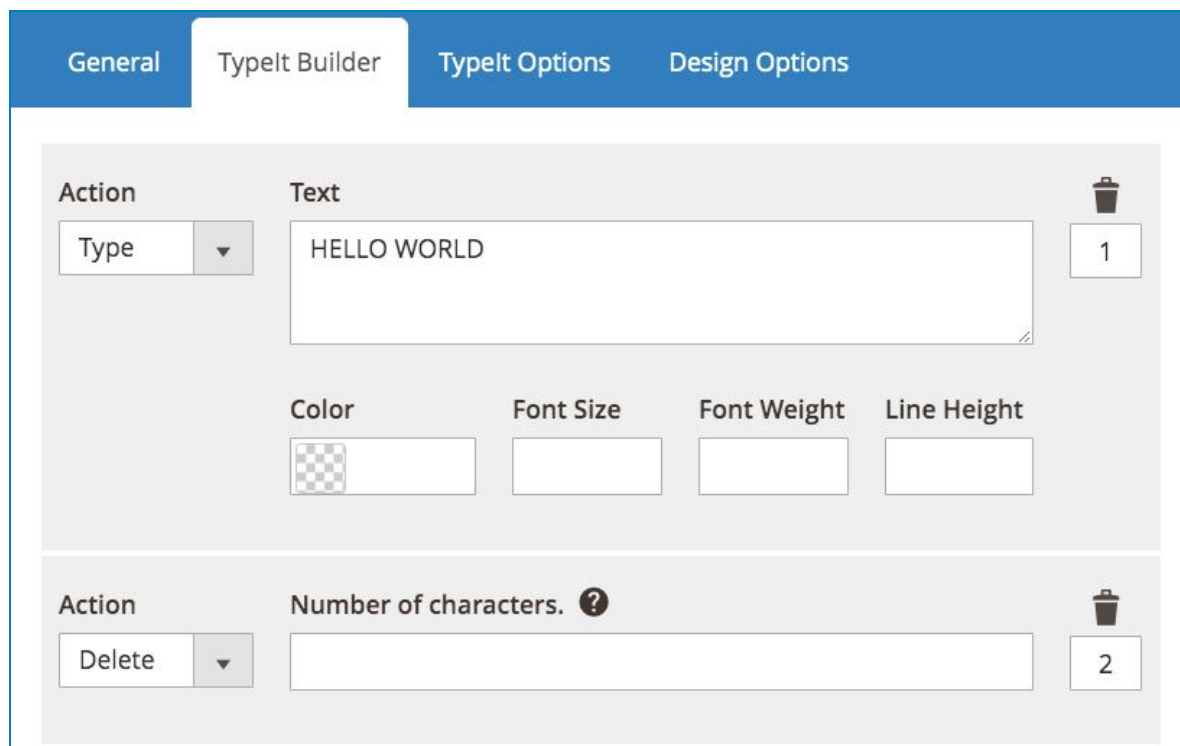

- Deleting all the letters: Leave the **Number of characters** field empty.
- Delete limit number of characters: Enter the number into the field.

Find the detailed indication of the field by hovering the question icon:

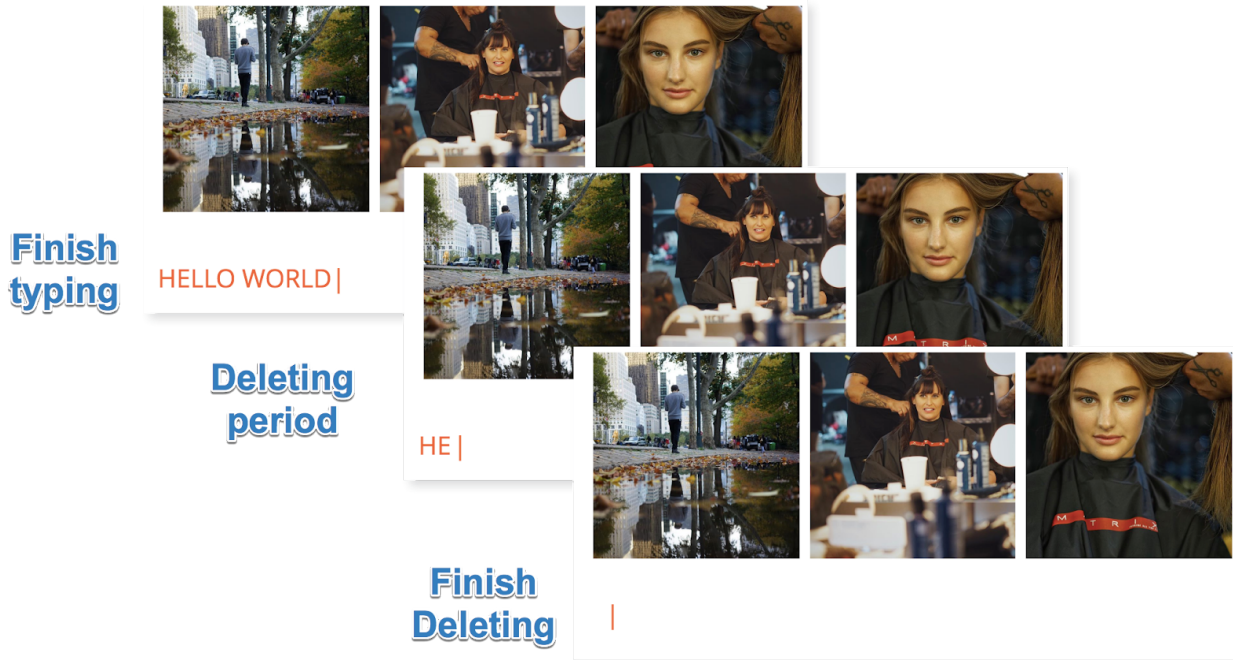

Follow 2 examples here below:

- **Delete** ALL:
- + Backend:

+ Result in the front

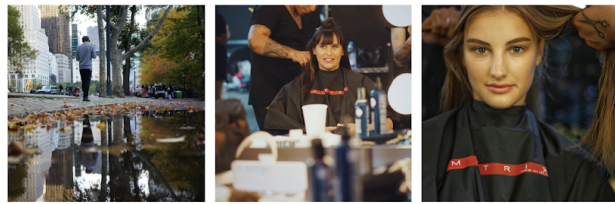

- **Delete** an exact number of characters:
- + Backend

General	Typelt Builder	Typelt Options	Design Options
Action	Text		
Type	HELLO WORLD		1
	Color	Font Size	Font Weight
	Line Height		
Action	Number of characters.		
Delete	5		2

+ Result:

**Finish
typing**

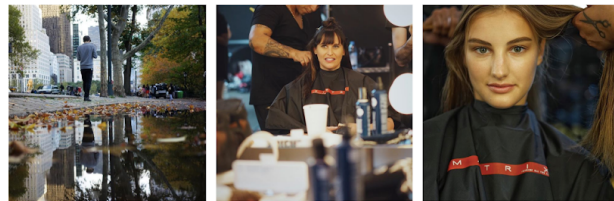

HELLO WORLD |

**Deleting
period**

HELLO WORL |

**Finish
Deleting**

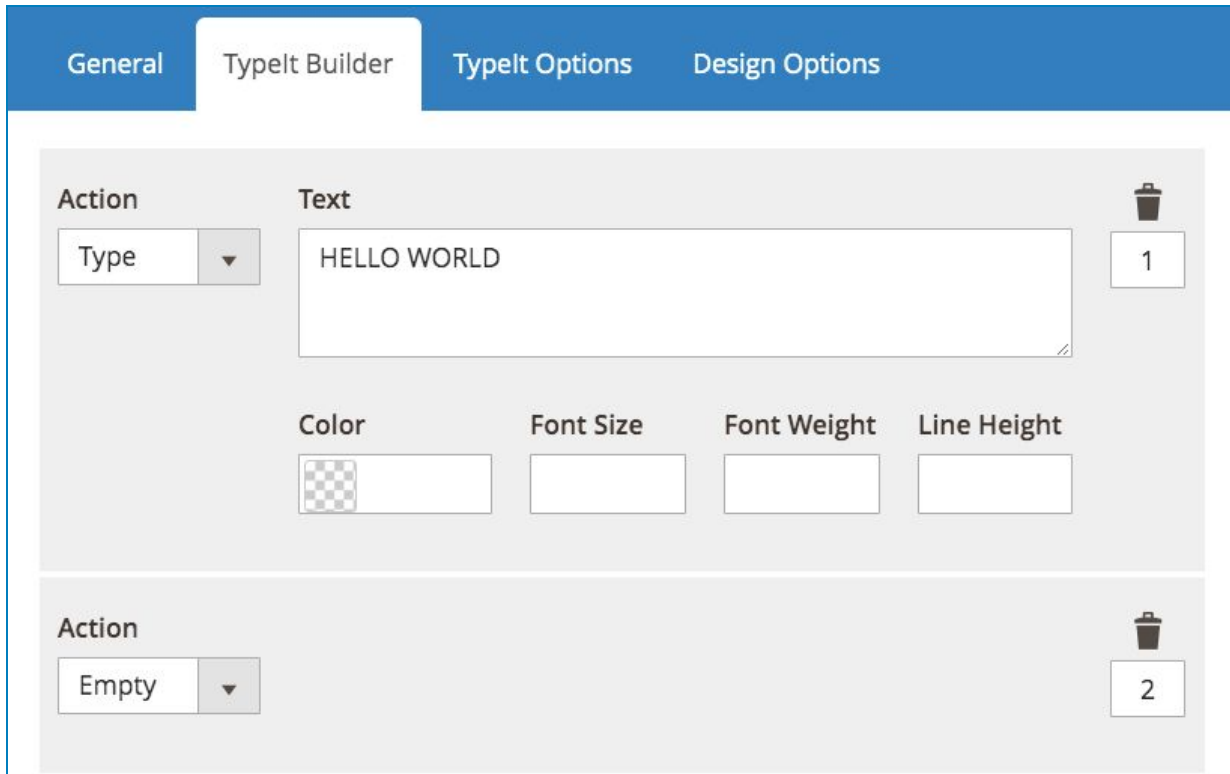

HELLO |

2.4 Empty

While **Delete** action only lets delete LETTER BY LETTER, **Empty** lets you erase ALL the text AT ONCE.

Set the configuration like this

The screenshot shows the 'Typeit Builder' tab in a software interface. It contains two text elements, numbered 1 and 2. Element 1 has the action 'Type' and the text 'HELLO WORLD'. Below the text field are four design options: Color (with a checkerboard icon), Font Size, Font Weight, and Line Height. Element 2 has the action 'Empty'.

Action	Text	Design Options	Number
Type	HELLO WORLD	Color, Font Size, Font Weight, Line Height	1
Empty			2

Then the result be like:

**Finish
typing**

HELLO WORLD |

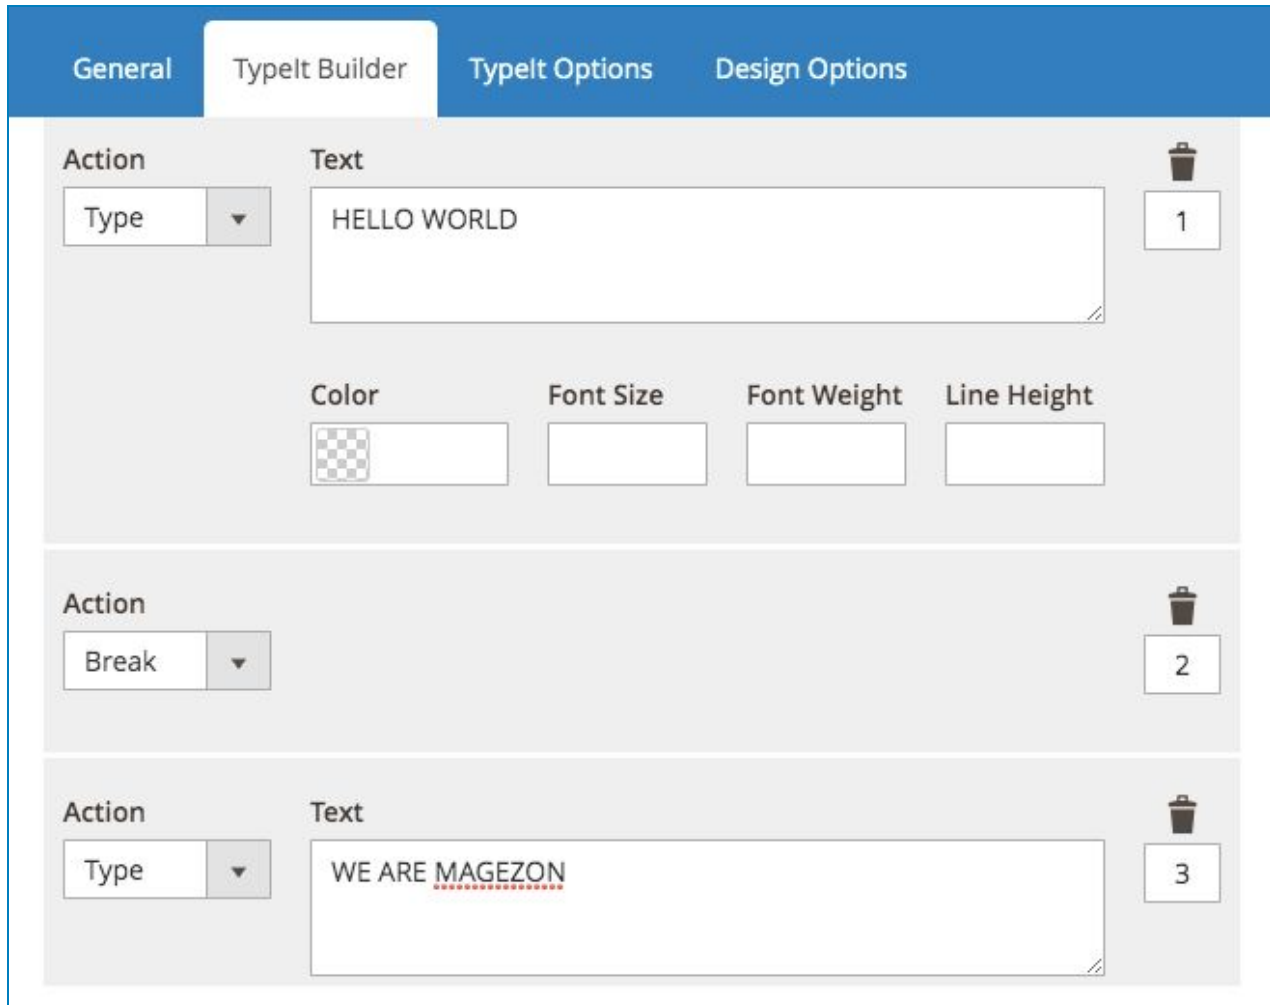

Empty

|

2.5 Break

Use **Break** action to break current string into new line. Let's make an example like this:

The screenshot displays the 'Typeit Builder' interface with three text elements:

- Element 1:** Action: Type; Text: HELLO WORLD; ID: 1
- Element 2:** Action: Break; ID: 2
- Element 3:** Action: Type; Text: WE ARE MAGEZON; ID: 3

And the result will look like this:

Follow Us!

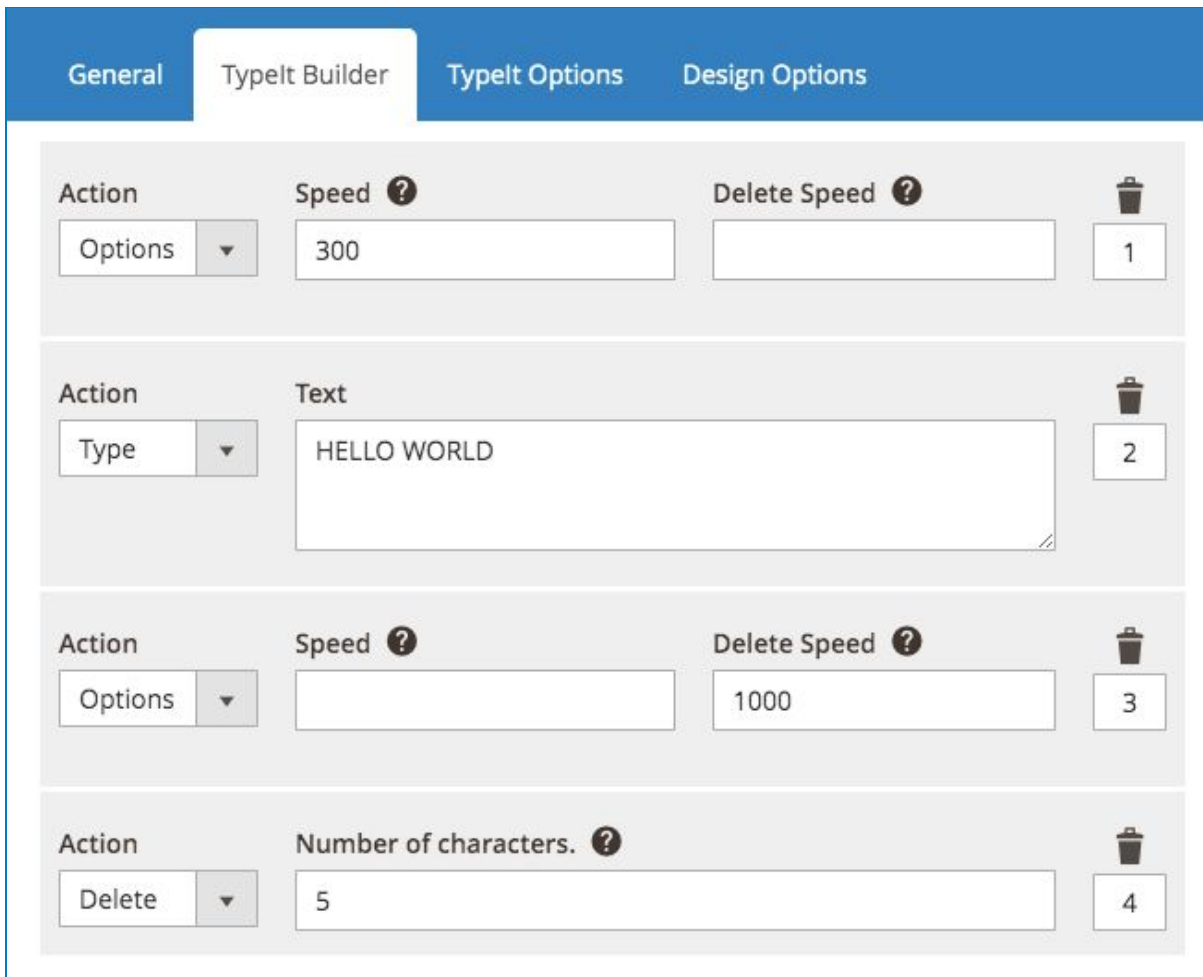

HELLO WORLD

WE ARE MAGEZON |

2.6 Options

This action lets you customize the typing and deleting speed for the following action. (We eliminate section Color, Font Size, etc... in Action Type to get more space displaying other actions)

See the below example:

General	Typelt Builder	Typelt Options	Design Options
Action	Speed ?	Delete Speed ?	
Options ▼	300		1
Action	Text		
Type ▼	HELLO WORLD		2
Action	Speed ?	Delete Speed ?	
Options ▼		1000	3
Action	Number of characters. ?		
Delete ▼	5		4

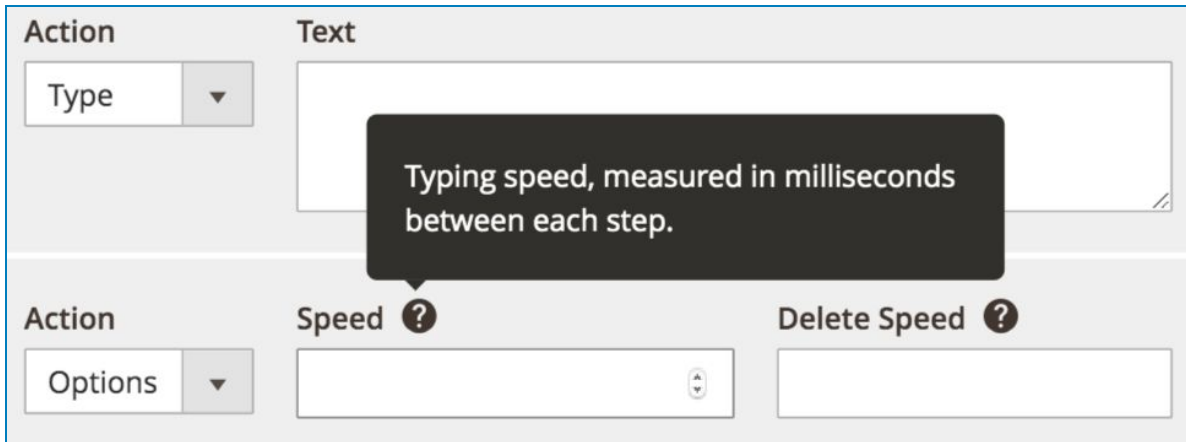

When you configure the setting like this, the text will run with the format:

- Type "HELLO WORLD" with the speed of 300
- Then, Delete "WORLD" with the speed of 1000

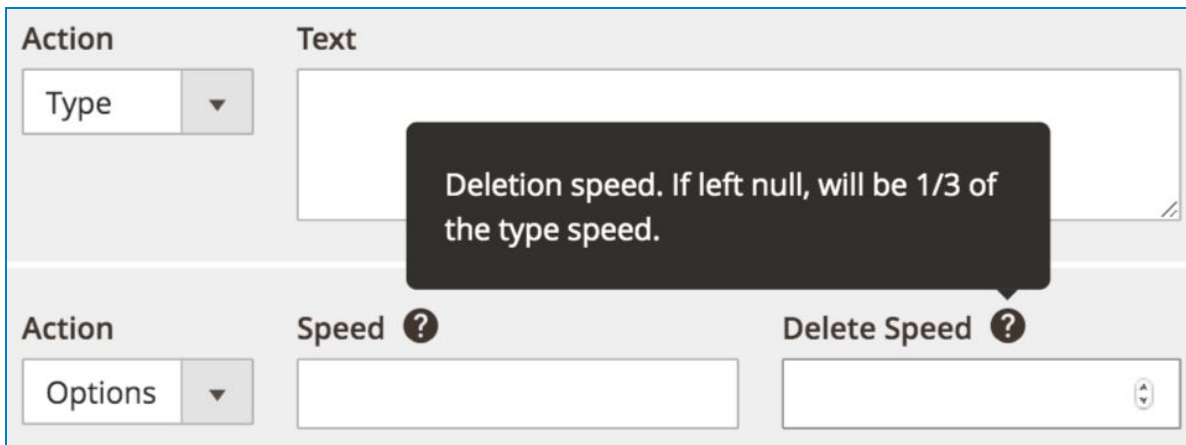

Note:

Speed field: Typing speed, measured in milliseconds between each step.

Delete Speed field: Deletion speed. If left null, will be 1/3 of the typing speed.

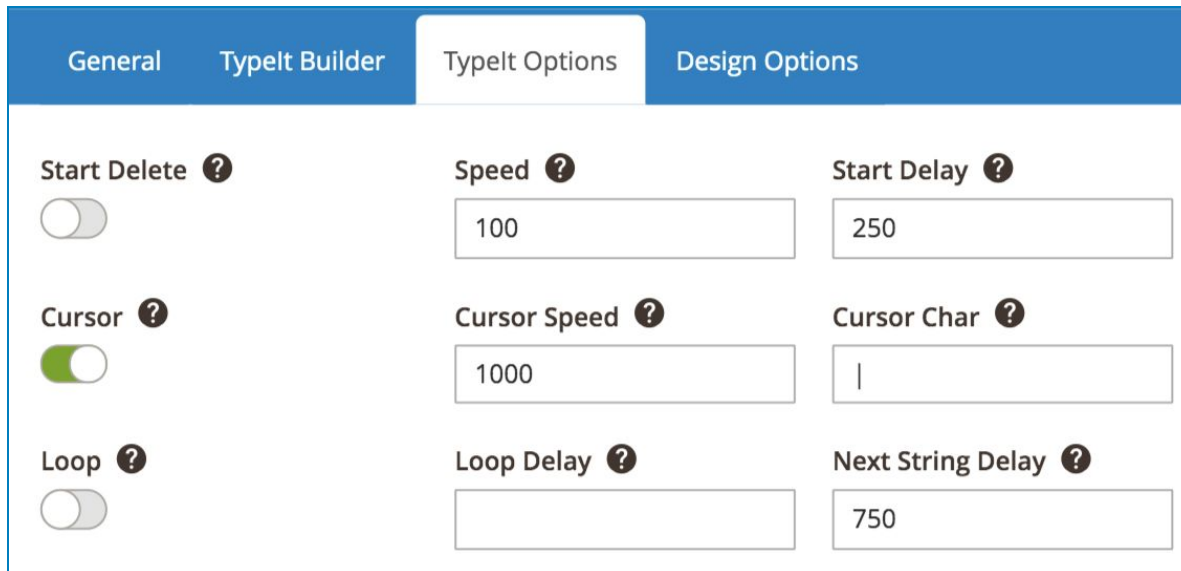

The screenshot shows a form with two sections. The top section has an 'Action' dropdown set to 'Type' and a 'Text' input field. A callout box points to the 'Speed' field in the bottom section, which is currently empty. The bottom section also has an 'Action' dropdown set to 'Options' and a 'Delete Speed' field.

The screenshot shows a form with two sections. The top section has an 'Action' dropdown set to 'Type' and a 'Text' input field. A callout box points to the 'Delete Speed' field in the bottom section, which is currently empty. The bottom section also has an 'Action' dropdown set to 'Options' and a 'Speed' field.

3. Typeit Options

The Typeit Options tab will look like this:

The screenshot shows the 'Typeit Options' tab in a blue-themed interface. It contains a 3x3 grid of settings:

- Start Delete**: A toggle switch that is currently turned off.
- Speed**: A text input field containing the value '100'.
- Start Delay**: A text input field containing the value '250'.
- Cursor**: A toggle switch that is currently turned on.
- Cursor Speed**: A text input field containing the value '1000'.
- Cursor Char**: A text input field containing a vertical bar character '|'.
- Loop**: A toggle switch that is currently turned off.
- Loop Delay**: An empty text input field.
- Next String Delay**: A text input field containing the value '750'.

The tab contains following functions (Hover on the question marks to see the notes):

- **Start Delete**: Switch the on-off button to decide whether to begin instance by deleting default text.
- **Speed**: Typing speed, measured by milliseconds between each step.
- **Start Delay**: The amount of time before the plugin begins typing after being initialized. Default is 250.
- **Cursor**: Switch the on-off button to show a blinking cursor at the end of the string(s).
- **Cursor Speed**: The blinking speed of the cursor, measured in milliseconds. Default is 1000.

- **Cursor Char:** The character used for the cursor. HTML works too!
Try setting the Cursor Char like this:

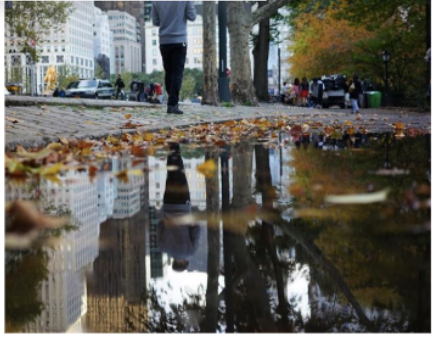

Cursor Char ?

_

Backend

Frontend

WE ARE MAGEZON_

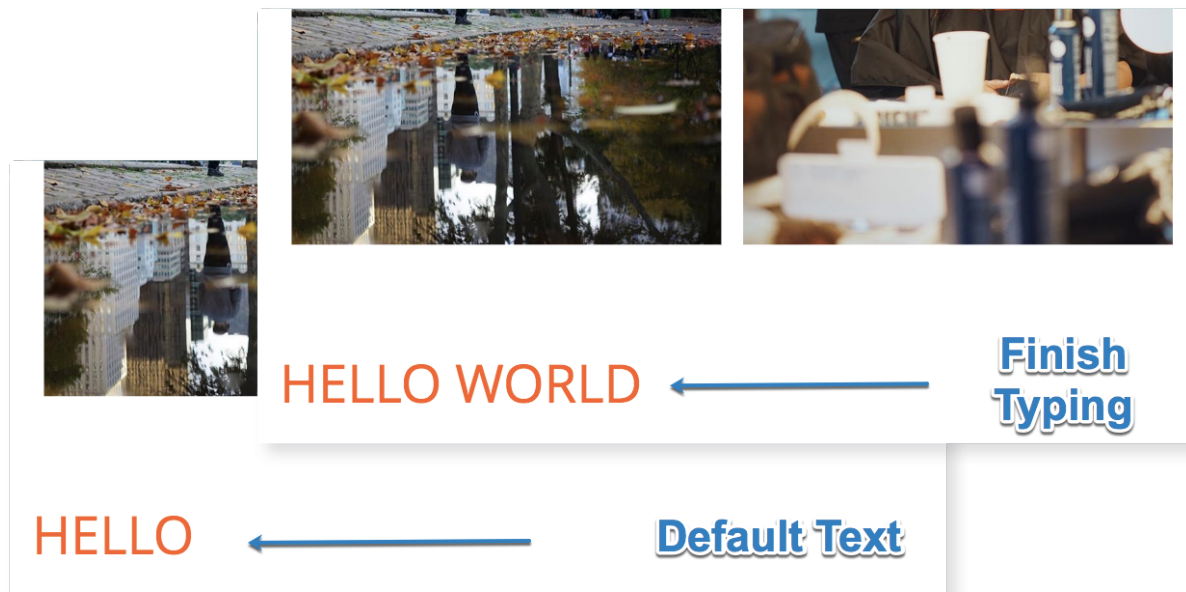

- **Loop:** Switch the on-off button to decide whether your strings will continuously loop after completing.
- **Loop Delay:** The amount of time between looping over a string or set of strings again.
- **Next String Delay:** The amount of time (in milliseconds) between typing multiple strings.
Default is 750.

- **Default Text:**

Enter the content that you want to show as default before starting to type. Try this setting

Default Text

Then the result will be like:

- **Text Color:** Decorate your string with colors.
- **Text Font Size:** Design the text size rationally.
- **Text Line Height:** Select a suitable space between lines.
- **Text Font Weight:** Decide your text to be thin or strong.

To know more about the functions, let's make an example and see its result:

Text Color  #007dbd	Text Font Size 50
Text Line Height 1.5	Text Font Weight 60

And result in the store front:

Follow Us!

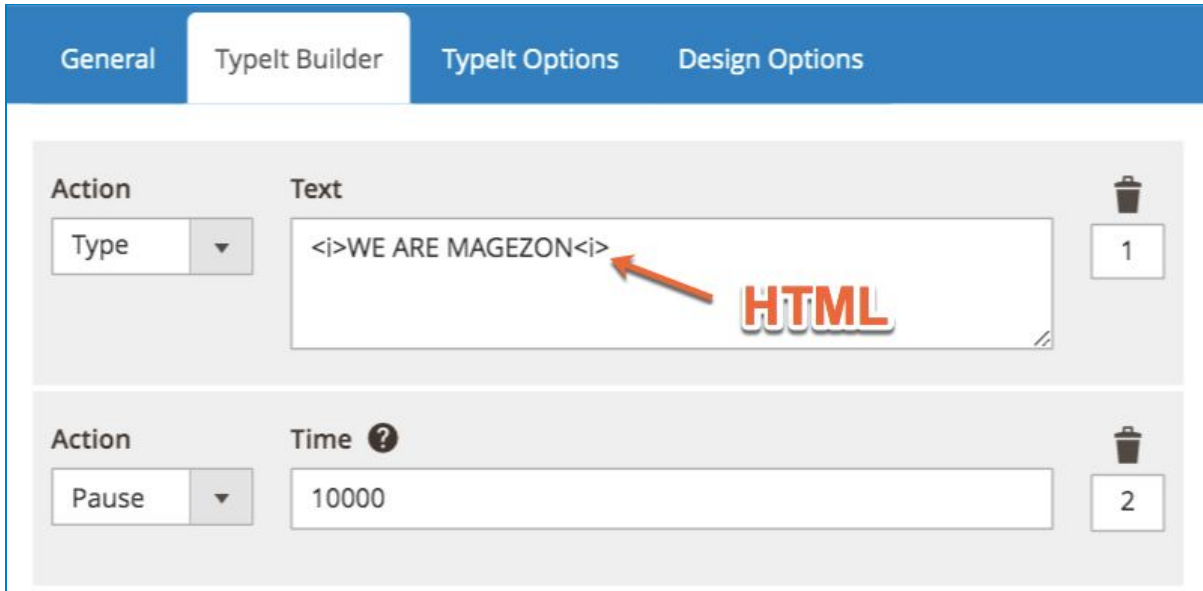

WE ARE MAGEZON  **Text line height**

WE PROVIDE MAGENTO EXTENSIONS 

 **Text Color**  **Text Size**

IV) HTML

Beside the common settings, you can use HTML to design the strings.
For example:

And the result be like:

V) Support

If you have any questions or need any support, feel free to contact us. We will get back to you within 24 hours since you submit your support request.

- Submit [Contact Us](#) form.
- Email us at support@magezon.com.
- Submit a [ticket](#).
- Contact us through [Skype](#): support@magezon.com.
